

What Is The Fee for AEC II?

The minimum fee for AEC II is \$25, which covers the cost of the first 100 records. There is an additional charge of 25¢ for each record indicated as Corrected or ADNE (Address Does Not Exist).

AEC II also processes other types of records at no additional charge, such as the *Historical File Match* and the *PO Box Delivery Exclusion*. In a Historical File Match, the record submitted has been corrected to one that was previously submitted and retained in the historical file. With a PO Box Delivery Exclusion, the record submitted has either been corrected, or it is a valid address, but the particular customer does not actually receive their mail at the address.

All AEC II customers are automatically enrolled in AEC and incur the required AEC processing fees. This consists of a minimum AEC fee of \$15 for the first 1,000 records submitted, and 1.5¢ for each additional record submitted.

AEC II Resolutions	Charges Per Record
Corrected	25¢
ADNE	25¢
History	no additional charge
PO Exclusion	no additional charge

How Do You Submit Files for AEC II® Processing?

Mailers may submit files for AEC and AEC II processing by Mail, E-mail, or Internet to the National Customer Support Center (NCSC).

Mail address files to

OFFICE SERVICES
NATIONAL CUSTOMER SUPPORT CENTER
UNITED STATES POSTAL SERVICE
6060 PRIMACY PKWY STE 101
MEMPHIS TN 38188-0001

To transmit address files via the Internet, contact the AEC Department at the NCSC.

Fax processing request forms to

901-681-4409
Attn: Office Services

AEC II®

Powered through
Delivery Force
Knowledge™

Address Element Correction
(AEC) & AEC II®

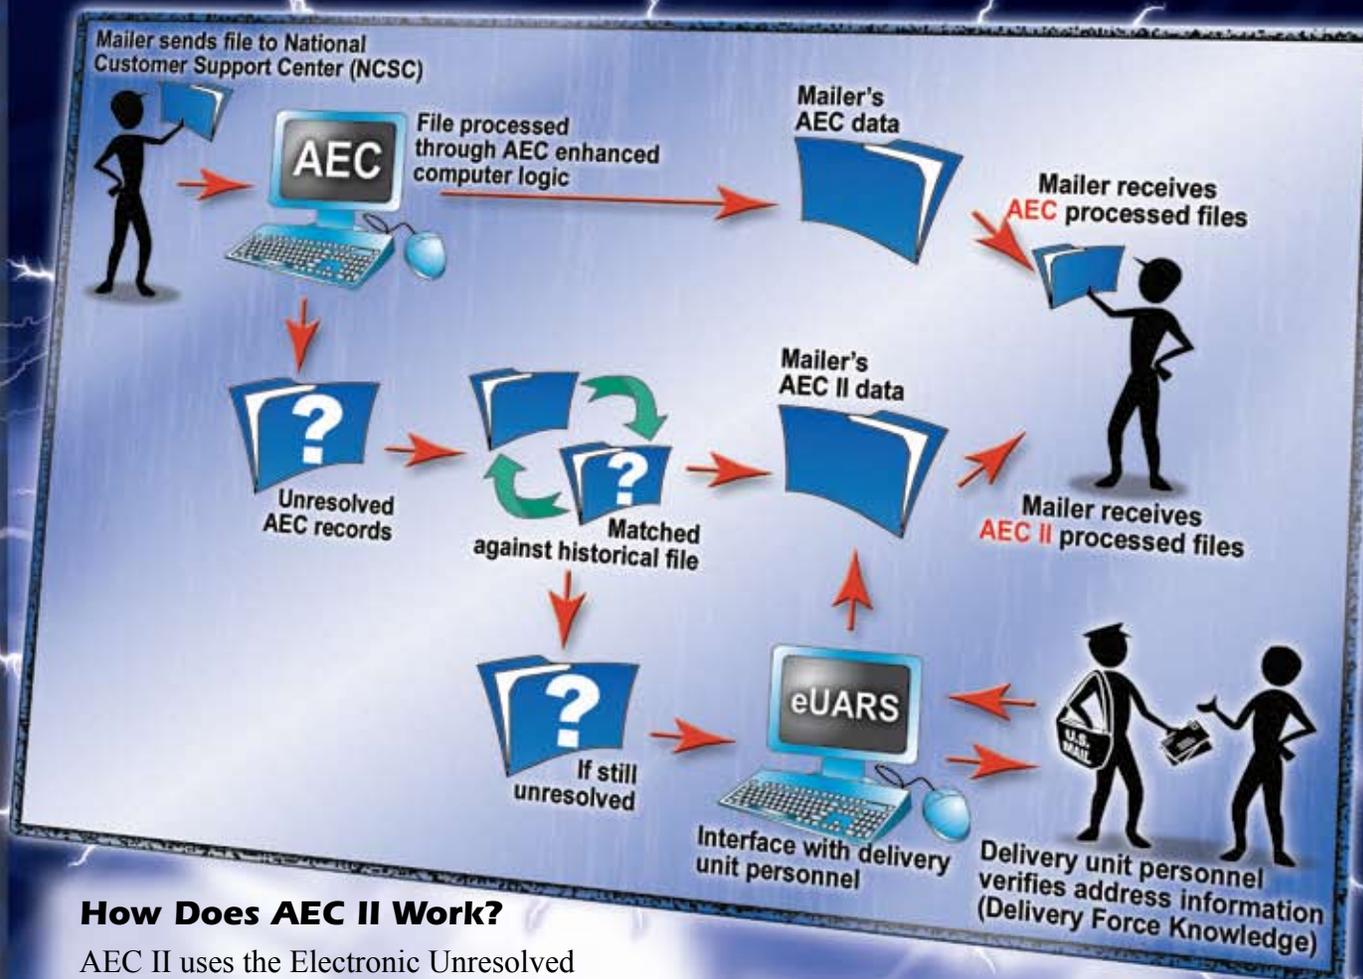

AEC II® Puts Delivery Force Knowledge to Work... For YOU!

Now, thanks to AEC II, you have the Delivery Force Knowledge of the United States Postal Service® to correct those “bad” addresses that plague every mailing list!

AEC II helps mailers resolve “bad” addresses that could not be successfully coded through existing address matching software. But, no software program, no matter how sophisticated, will ever know your customers’ addresses better than the postal workforce who delivers for them every day. Don’t let another customer or sales opportunity slip through your fingers because of a “bad” address! Sign up for AEC II today!

What Is AEC II?

AEC II is an enhancement to the existing Address Element Correction (AEC) service, which identifies and corrects “bad” addresses using a complex computer program. “Bad” addresses that cannot be resolved using AEC are submitted, via AEC II, to delivery offices for review and resolution by the same people who deliver the mail for you every day. When USPS carriers are able to identify and correct address errors, or to identify addresses that do not exist, address quality is improved.

How Does AEC II Work?

AEC II uses the Electronic Unresolved Address Resolution System (eUARS) to provide an electronic process for enabling delivery unit personnel to correct address records. As USPS employees correct “bad” addresses, they are added to the AEC II historical file.

So, when the same “bad” addresses are found on different mailing lists, they won’t be re-submitted to delivery offices for correction. If a “bad” address record cannot be resolved by the AEC program or matched against a corrected record in the AEC II historical file, that record is sent through eUARS to a delivery unit for resolution by delivery personnel.

What Can AEC II Do For You?

AEC II provides these benefits for mailers:

- Reduces mailing costs
- Reduces Undeliverable-as-Addressed (UAA) mail
- Improves customer satisfaction

When you sign up for AEC II, you have the opportunity to select a specific number of days (30, 60, or 90) that you would like your records to remain in the eUARS system (to be potentially resolved) before those addresses are permanently deleted from the process.
