

PostalOne!®
Version 20.0.1.2 – Release Notes

An emergency patch to *PostalOne! Release 20.0.1.* was deployed Sunday, June 28, 2009 to correct a critical issue with the system. This patch was originally scheduled for deployment on Tuesday, June 30, 2009 as *PostalOne! Release 20.0.1.3*, however the release was advanced to *Release 20.0.1.2* and deployed on Sunday.

These Release Notes, updated from the Pre-Release Notes, describe what was deployed in *Release 20.0.1.2.*

1.	MAILERS	2
	<u>Periodicals</u>	2
	<u>Mail.dat File Loader</u>	2

1. Mailers

Release 20.0.1.2 of *PostalOne!* contained enhancements to the system for continued support of Full-Service implementation. Two critical issues were identified after the deployment of Release 20.0.1.1 and were resolved in this release. The following items describe those items of interest to external users of *PostalOne!*

Periodicals

The change to Mail.dat processing of Periodicals files is described as follows:

Postal clerks can now change the component weight in the edition weight worksheet for a mail piece unit that has a single component and the affected postage statements shall be calculated with the changed weight. Mailers can now display the changed weight in the edition weight worksheet for a mail piece unit that has a single component and the changed postage statements. The workaround to submit the corrected weights in the Mail.dat file for the mail piece units with single components is no longer necessary. 38886

Mail.dat File Loader

This patch release corrected an issue with the Mail.dat File Loader. Enhancements were made to improve processing large Mail.dat 09-1 Periodicals Co-mail update jobs and prevent failures. 39056
