

CDS No Stat

The Postal Service address database includes information on addresses currently not receiving mail delivery.

Addresses not receiving mail may include:

- new housing developments
- vacant delivery points on rural routes
- addresses for delivery points in gated communities (identified with a drop count on the address where all mail is delivered)

The purpose of providing CDS customers with CDS No-Stat and Rural Route vacant addresses is to allow mailers to:

- Begin mailing to new delivery points when requested by the occupant
- Resume mailing to a previously vacant Rural Route address when requested by the occupant, without waiting for updated information from USPS

These types of addresses are identified as a CDS No-Stat in the AMS database. CDS No-Stat records may be found in City and Rural/Highway Contract Routes. They will not be found in PO box records.

A supplemental file of the CDS No-Stats found in the USPS® database is available to all current CDS qualified ZIP Codes. This file will be provided via EPF for weekly or bimonthly customers.

Updates are provided in the same file layout as the current CDS files and on the same fulfillment schedules. Customers requesting the CDS No-Stat supplemental file are provided the relevant USPS eLOT product to assist in merging the CDS No-Stat data into their file in proper sequence. Contact the NCSC Customer Support Department, 1-800-238-3150, or cds.ncsc@usps.gov for the current fee schedule.

The attached document identifies the approximate number of CDS No Stat addresses by address group and ZIP Code.
