1 Overview

1.1 Scope of this User Guide

This user guide shows mailers how to obtain Container, Tray, and Bundle tracking information.

Informed Visibility™ data for Full-Service Commercial mail containers, trays, and bundles is available through Mail.XML™ messaging and *PostalOne!* reports. These visibility events are captured as USPS processes mail that includes an Intelligent Mail™ container barcode (IMcb), Intelligent Mail tray barcode (IMtb), or Intelligent Mail barcode (IMb) through the following activities:

- Container scans captured at induction
- Scans captured as containers and trays are transported via surface routes
- Scans captured as trays are transported via air routes
- Scans captured as trays are processed by USPS at a facility
- Scans captured as bundles are scanned on automation bundle sorting equipment

Note: This visibility data is limited to Full-Service mailings.

1.2 Out of Scope: Mailpiece Tracking

Mailpiece tracking is also available for all mailers. IMb Tracing™ is a **FREE** service that provides real-time tracking information for automation-compatible letters and flats. In addition to automation piece scans, IMb Tracing also provides automation bundle scans.

Please see the [IMb Tracing™ page](#) on RIBBS® for more information on how to obtain automation mailpiece and bundle scan events.

2 Informed Visibility Subscription Recipients

2.1 Determining Mail Owner and Mail Preparer

A user's access to Container, Tray, and Bundle Visibility data is determined based on mailer-submitted information in electronic documentation and profiles in the Mailer ID (MID) system.

Visibility events are made available to both the mail owner and/or preparer (mailing agent) associated with an IMcb, IMtb, or IMb (top piece for bundles). All mail owner(s) and preparer(s) are determined based on the By/For Order of Precedence found in the [Guide to Intelligent Mail for Letters and Flats](#) on RIBBS.

Please note:

1. By default, both the mail owner and mail preparer (as designated by the By/For Order of Precedence) have access to Container, Tray, and Bundle Visibility data.
2. The mail owner (MO) can designate access to an owner delegate. If a mail owner delegates access to an owner delegate, then the mail owner cannot also have access.
3. The mail preparer (MP) can designate access to a preparer delegate. If a mail preparer delegates access to a preparer delegate, then the mail preparer cannot also have access.

2.2 Data Delegation

Third parties can be granted access to Informed Visibility through delegation profiles available in the MID system. In order to delegate data, a MID Profile must be established in the MID System. See Sections 2.2.2 and 2.2.3 for more information.

The following delegation profiles are available for Informed Visibility:

- Container Visibility
- Tray Visibility
- Bundle Visibility

2.2.1 Full Service Data Delegation Overview

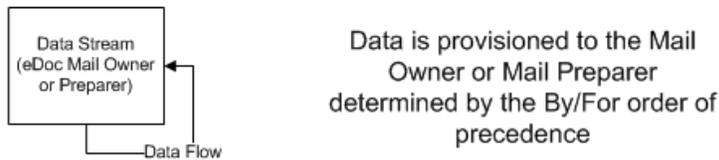

Data delegation scenarios by data type:

| Scenario ↓ Data Type → | Confirm/ IMb Tracing | Address Correction | | Container Vis/STC | | Tray Vis | | Bundle Vis | | How to implement this delegation type |
|------------------------|-------------------------|-----------------------|---------------|----------------------|---------------|------------|---------------|------------|---------------|---|
| | MID on Piece | Mail Owner | Mail Preparer | Mail Owner | Mail Preparer | Mail Owner | Mail Preparer | Mail Owner | Mail Preparer | |
| MO/MP | ○ | ● | ○ | ● | ● | ● | ● | ● | ● | This is the default delegation scenario for all except IMB tracing . No action required. |
| Complete/Third Party | ● | ● | ○ | ● | ● | ● | ● | ● | ● | This requires a static complete profile to be completed within the MID system. <i>Please note, the data owning entity for IMB Tracing is the MID on the piece. Not the mail owner/preparer.</i> |
| Partial MID on Piece | ● | ● | ○ | ○ | ○ | ○ | ○ | ○ | ○ | For IMB tracing, this is the default action. For ACS, a partial MID on Piece profile should be created within the MID system. |
| Partial Mail Preparer | ○ | ● | ○ | ○ | ○ | ○ | ○ | ○ | ○ | A profile should be created within the MID system for partial mail preparer |
| Delegated | ○ | ○ | ○ | ○ | ○ | ○ | ○ | ○ | ○ | A delegated profile should be created within the MID system |

2.2.2 Accessing the MID Profile Page

MID Data Delegation is managed through the Mailer ID (MID) system, accessible via the *PostalOne!* Business Customer Gateway at <https://gateway.usps.com/bcg/login.htm>.

Refer to the [User Access to Electronic Mailing Information and Reports Guide](#) on RIBBS for a step-by-step approach to requesting access to the Mailer ID system through the BCG.

Following is the step-by-step process of accessing the MID system along with the screen shots of each step:

STEP 1 - Login to Customer gateway at <https://gateway.usps.com/bcg/login.htm> using a valid username and password.

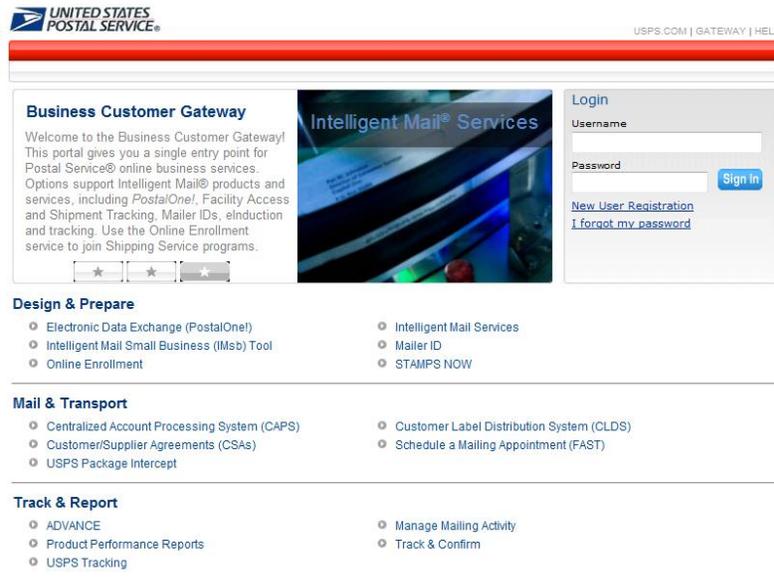

Figure 3: External Customer login through BCG

STEP 2 - Navigate through the home page by clicking on “Mailer ID” under “Design & Prepare” section.

Page 1 of 1

Figure 5: MID System Page

2.2.3 Data Distribution Profile Page

All users have access to the profile page, but for only the MIDs owned by their CRID (or for MIDs that someone else has Delegated maintenance to them).

Data can be delegated separately for container, tray, and bundle visibility. For example, container visibility can be delegated to one party and bundle visibility to another.

Updates to this page are immediate; no approvals are required.

Note: The term **“Delegation”** within the MID system refers to the ability to Delegate the maintenance of a Data Distribution Profile to another company (CRID). It does not mean delegating who data is shared with. A user can Delegate the maintenance to another CRID without even creating a profile; it would then be up to the Delegatee to create/edit the profile. The top portion of the screen below is where this Delegation takes place; the bottom portion of the screen is where the Data Distribution Profiles are defined.

The Data Distribution Profile screen is shown below.

UNITED STATES POSTAL SERVICE®

USPS.COM | GATEWAY | HELP | SIGN OUT

Hello, Frank Council

Mailer ID (MID) Data Recipient Profile

MID: 901105273 Site: FPC Inc
9138 E MILTON AVE
OVERLAND, MO 63114-4807

CRID: 8864271

Delegate the management of this Mailer ID Data Recipient Profile to the business listed below. Delegation enables the Mailer ID Data Recipient Profile for this Mailer ID to match that of the business listed below.

Figure 10: Bundle Visibility Delegation

3 Data Distribution Options

The *PostalOne!* system distributes container, tray and bundle visibility data to authorized users using the following two options:

1. *PostalOne!* Reports (Online and Downloadable)
2. Mail.XML™ messaging

Note: The availability of data is dependent on operational events and system processing. As a result, there will be a delay in data availability.

3.1 PostalOne! Reports

3.1.1 Accessing *PostalOne!* Reports via Data Distribution Dashboard

Container, tray, and bundle visibility reports are available via the *PostalOne!* Business Customer Gateway at <https://gateway.usps.com/bcg/login.htm>.

Following is the step-by-step process of accessing Informed Visibility reports along with the screen shots of each step:

STEP 1 - Login to Customer gateway at <https://gateway.usps.com/bcg/login.htm> using a valid username and password.

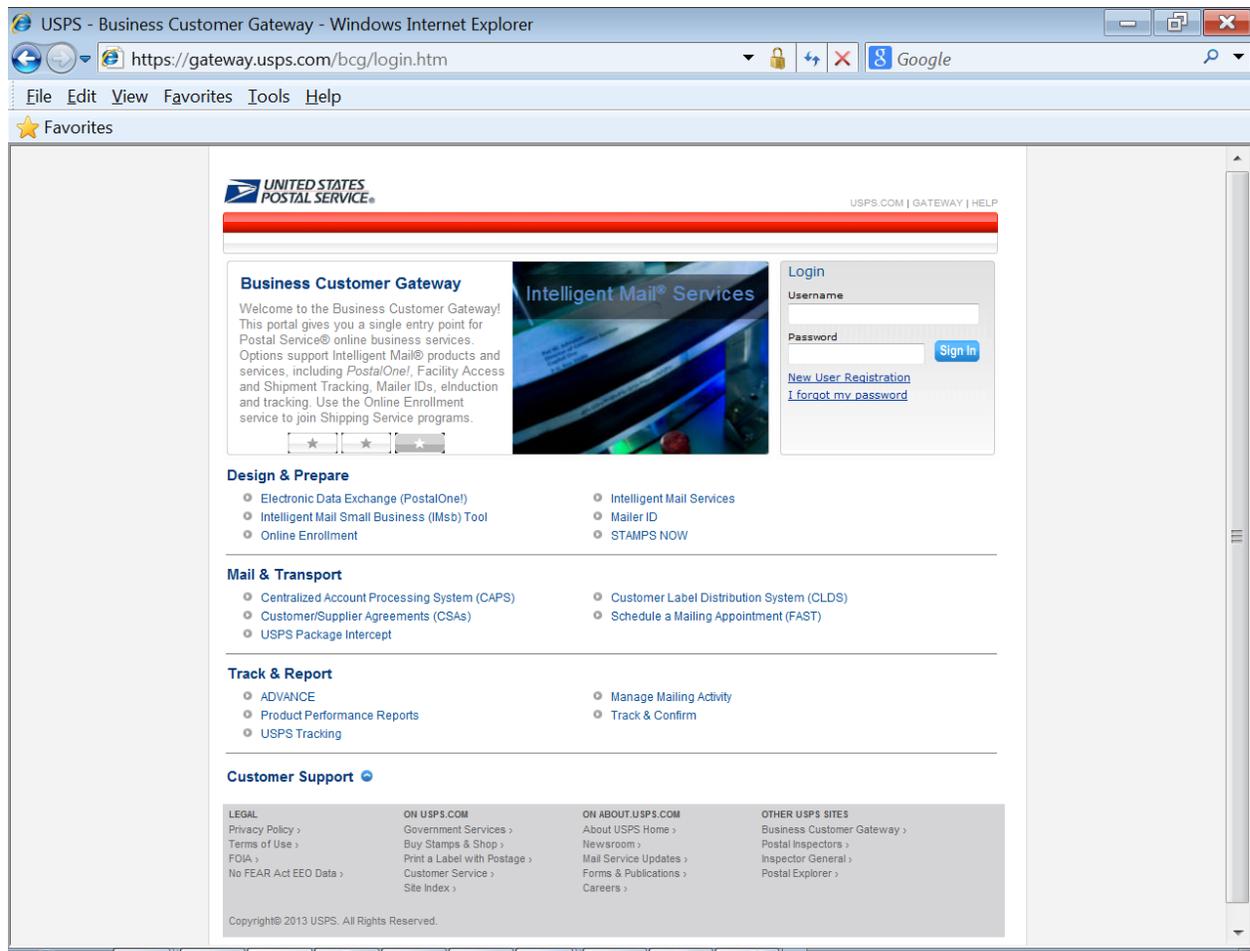

Figure 11: External Customer login through BCG

STEP 2 - Navigate through the home page by clicking on “Mailing Reports (*PostalOne!*)” under “Tools and Wizard” section.

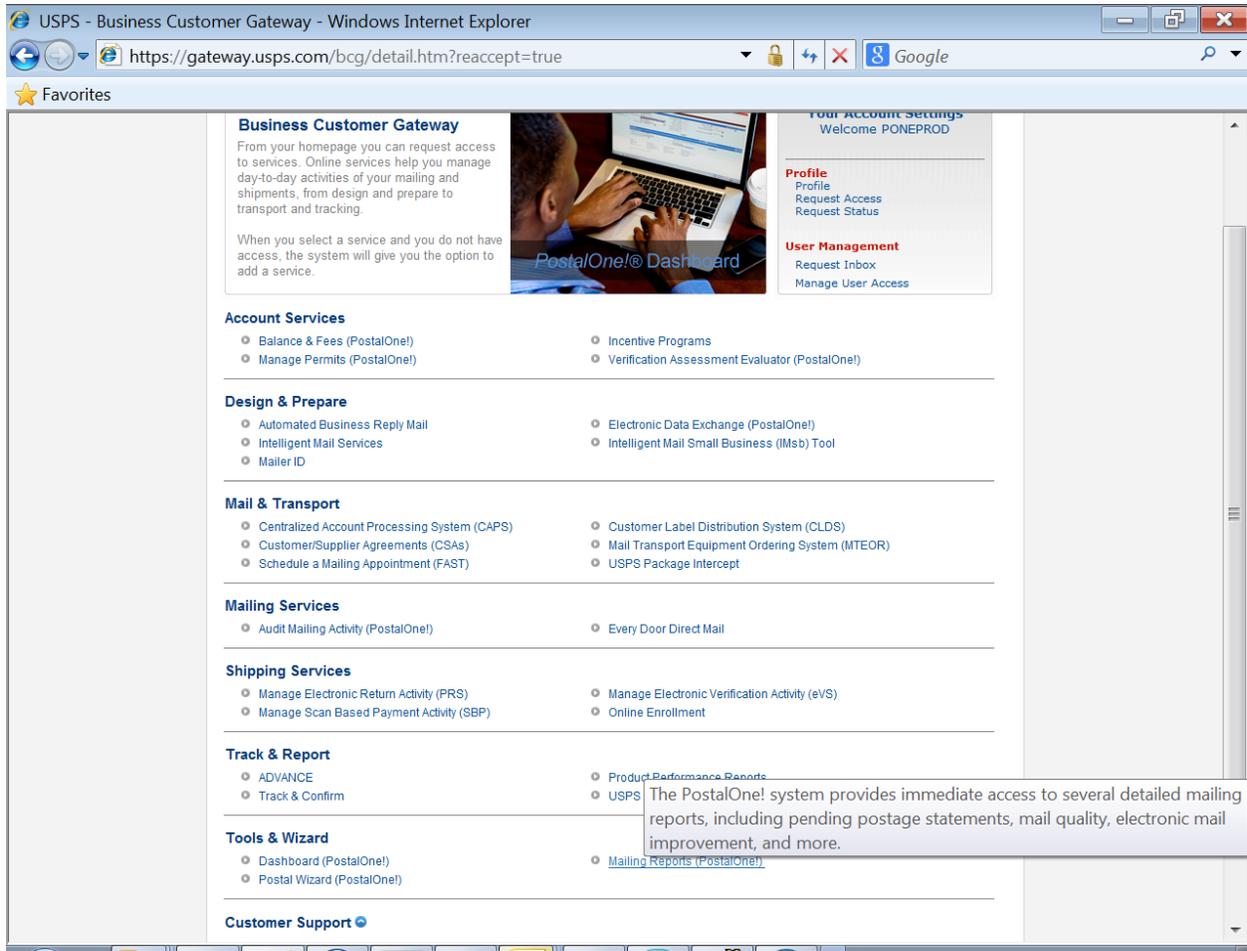

Figure 12: User Home Page

STEP 3 - Navigate through the home page by clicking on the “Data Distribution/Informed Visibility Dashboard” link under “Full Service” section.

3.1.2 Accessing the Informed Visibility Query and Reporting Interface

From the *PostalOne!* Data Distribution Dashboard, users can navigate to the Informed Visibility query interface in two ways.

The first way to navigate to the Informed Visibility query interface is to click on the “[Download/Online]” action link associated to the “2. Informed Visibility Report” report type on the “Online & Downloadable Reports” tab of the *PostalOne!* Data Distribution Dashboard. See Figure 3.1.2-1 for a screenshot of this page.

| Report Type | Action |
|---|---------------------|
| 1. Full-Service Start-the-Clock Report ¹ | [Download] [Online] |
| 2. Informed Visibility Report ¹ | [Download/Online] |
| 3. Full-Service ACS Change of Address (COA) Report ² | [Download] |
| 4. Full-Service ACS Nixie Report ² | [Download] |
| 5. Full-Service Data Quality Report ³ | [Microstrategy] |
| 6. Full-Service By/For Conflict Report | [Download] |

Figure 14: “Online & Downloadable Reports” tab of the PostalOne! Data Distribution Dashboard

The second way to navigate to the Informed Visibility query interface, is to click on the “Informed Visibility” tab of the *PostalOne!* Data Distribution Dashboard. See Figure 3.1.2-2 for a screenshot of this page.

| | | | | | | | |
|-------------------------------|---------------------------|------------------------|--------------------------------|-------------------------|-----------------------|---------------------|-------------------------|
| Online & Downloadable Reports | Data Distribution Summary | Container Scan Summary | Full-Service COA/Nixie Summary | By/For Conflict Summary | User Download History | Informed Visibility | Data Delegation History |
|-------------------------------|---------------------------|------------------------|--------------------------------|-------------------------|-----------------------|---------------------|-------------------------|

Figure 15: "Informed Visibility" tab of the PostalOne! Data Distribution Dashboard

3.1.3 Informed Visibility Search Page

Clicking on the “Data Distribution/Informed Visibility Dashboard” will bring user to the following search screen.

Figure 16: Informed Visibility Search Page

| No. | Field | Description | Example |
|-----|--------------------------------|---|------------------------------|
| 1 | Saved Queries show/hide option | Show or hide the saved query of a user | |
| 2 | Download radio button | Download the search result | |
| 3 | Online radio button | View the search result online | |
| 4 | Container Visibility checkbox | Selecting this checkbox will show the results of Container Visibility | |
| 5 | Tray Visibility checkbox | Selecting this checkbox will show the results of Tray Visibility | |
| 6 | Bundle Visibility checkbox | Selecting this checkbox will show the results of Bundle Visibility | |
| 7 | Search By dropdown | Used in conjunction with ID Number text box. Dropdown options consist of: Job ID or Mailing Group ID. | 'Job ID', 'Mailing Group ID' |
| 8 | ID Number text box | Used in conjunction with Search By dropdown. Can be used to search for Job ID or Mailer Group ID, depending on which Search By dropdown option is selected. | |

| No. | Field | Description | Example |
|-----|---------------------------------|---|---|
| 9 | Search With dropdown | Used in conjunction with Barcode Number text box. Dropdown options consist of: 'exact value', 'starting value', 'ending value', 'containing value' | 'exact value', 'starting value', 'ending value', 'containing value' |
| 10 | Barcode Number text box | Used in conjunction with Search With dropdown. This field is used to search for an Intelligent Barcode – either an IMcb, IMtb, or IMb. A full or partial value can be entered into this field, depending on which Search With dropdown option is selected. | |
| 11 | Induction Facility dropdown | Name of the USPS facility where scan event was captured (selectable based on available data). Optional. If left blank, all matching Induction Facilities will be returned. | |
| 12 | Event Type dropdown | Used to limit which Event Type is returned. Optional. If left blank, all matching event types will be returned. (1) Electronic Information Received: USPS received finalized electronic documentation (2) Entered at USPS: Container or Orphan Handling Unit inducted to USPS network (scan used for Start-the-Clock) (3) Enroute Arrive: Container or Tray arrived at a USPS facility or Airport (4) Enroute: Tray or Bundle was processed at a USPS facility on sorting equipment (5) Enroute Depart: Container or Tray departed a USPS facility or Airport (6) Out for Delivery: Bundle departed Delivery Unit | 'Electronic Information Received', 'Entered at USPS', 'Enroute Arrive', 'Enroute', 'Enroute Depart', 'Out for Delivery' |
| 13 | Full-Service Indicator dropdown | Used to filter based on how the mail was prepared. Dropdown options consist of: Yes (Full-Service) and No (Non Full-Service). Note: Non Full-Service is <u>not</u> included as of October 2012. | 'No', 'Yes' |
| 14 | Start Date text box | Start Date of Full-Service available date range. Used in conjunction with End Date. Start Date is required. Please note that data is kept for a period of 45 days. | |

| No. | Field | Description | Example |
|-----|---------------------------------|--|---------------------------------------|
| 15 | End Date text box | <p>End Date of Full-Service available date range. Used in conjunction with Start Date. End Date is required. Please note that data is kept for a period of 45 days.</p> <p>Note: Full-Service Available Date reflects when data is loaded to the <i>PostalOne!</i> System and is available for customer access. This date does <u>not</u> represent the actual scan event date/time.</p> <p>Please limit the Date Range to 7 days.</p> | |
| 16 | Bundle/Package ID text box | Bundle/Package ID submitted in electronic documentation. Used to uniquely identify a bundle or a package within a job | |
| 17 | Mailer ID on the Piece text box | MID used within the Intelligent Mail Barcode | |
| 18 | Bundle Scan Type dropdown | <p>Scan Type of the Bundle or Mailpiece</p> <ul style="list-style-type: none"> a. Actual Only – includes IMb records on which bundle scan event was captured b. Assumed Only – includes IMb records on which mailpiece scan event is assumed based on bundle preparation/nesting in electronic documentation c. Both – includes both Actual bundle and Assumed mailpiece scan events <p>Note: Mail Owners of Flats can subscribe to the Assumed scan data as a precaution, assuming that their mailpiece may not be the top piece on the bundle. Assumed Scan data time will match the date/time of the top piece scan on a bundle.</p> | 'Actual Only', 'Assumed Only', 'Both' |

| 20 | Save Query button | Save the search criteria to a query in the database, for use later. | |

Table 1: Informed Visibility Search Page Field Description

3.1.3.1 Saving a Query

Informed Visibility Search page gives user an option to save the query for later use. After selection all the option the customer has to click on 'Save Query' button and the following screen will appear. Customer has to then give a name the query and click on 'Save' button to save the query for later use. A confirmation message will appear on the screen with the name of the query that has been saved in the *PostalOne!* database.

3.1.3.2 Using a Saved Query

Customer can use its saved query for its search instead of selecting all the options again. The names of the queries saved in the database appear on the screen and customer can select the query by clicking on the Select Radio button.

The screenshot shows a navigation bar with tabs: Online & Downloadable Reports, Data Distribution Summary, Container Scan Summary, Full-Service COA/Nixie Summary, By/For Conflict Summary, User Download History, **Informed Visibility**, and Data Delegation History.

Below the navigation bar is a 'Saved Queries' section with a 'show/hide' link. A table lists saved queries:

| Select One | Query Name | Created Date | Search Criteria |
|----------------------------------|-----------------|---------------------|--|
| <input checked="" type="radio"/> | test_02_13_2013 | 2013-02-14 07:28:05 | [Start Date=02/13/2013,End Date=02/13/2013,Search By=Job ID,ID Number=123,IM Container Barcode=1234567890,Search With=Induction Facility=ALBANY,Event Type=,Full-Service Ind= Bundle/Package ID=,Mailer ID=,Bundle Scan Type=,Search Containers=true,Search Handling Units=true,Search Pieces=false,View Results=Download,Display per Page=] |

Below the table are 'Rename' and 'Delete' buttons. The search criteria for the selected query are displayed in a form:

Figure 25: Download Excel Format Field Description

NOTE: Downloadable reports are available in .csv and .xls format.

3.2 Mail.XML™ Message Options

In addition to obtaining Container, Tray, and Bundle Visibility data through *PostalOne!* Reports (as described in Section 3.1), user can also obtain data using MailXML messages by using the following two options:

1. PUSH Messages – (Scheduled Subscriptions)
2. PULL Messages – (On Demand Requests)

Before using any of these two options customer has to go through a certification process (as described in appendix H) to ensure that its system is capable and ready to receive MailXML messages.

3.2.1 PUSH Messages

PUSH Messages are a set of MailXML 'Delivery' and 'Notification' messages. Customer can subscribe to either Delivery or Notification on a scheduled interval. If customer is subscribed to Delivery option, all the available data is PUSHed to customer at the specified interval. If customer is subscribed to Notification option, a notification message is sent to customer for the available data at the specified interval, customer can then PULL the data as needed.

3.2.1.1 PUSH Subscription Steps

In order to use PUSH functionality customer has to subscribe for a specific type of delivery or notification message via the *PostalOne!* Business Customer Gateway at <https://gateway.usps.com/bcg/login.htm>

Following is the step by step subscription process for PUSH messages along with the screen shots of each step:

STEP 1 - Login to Customer gateway at <https://gateway.usps.com/bcg/login.htm> using a valid username and password.

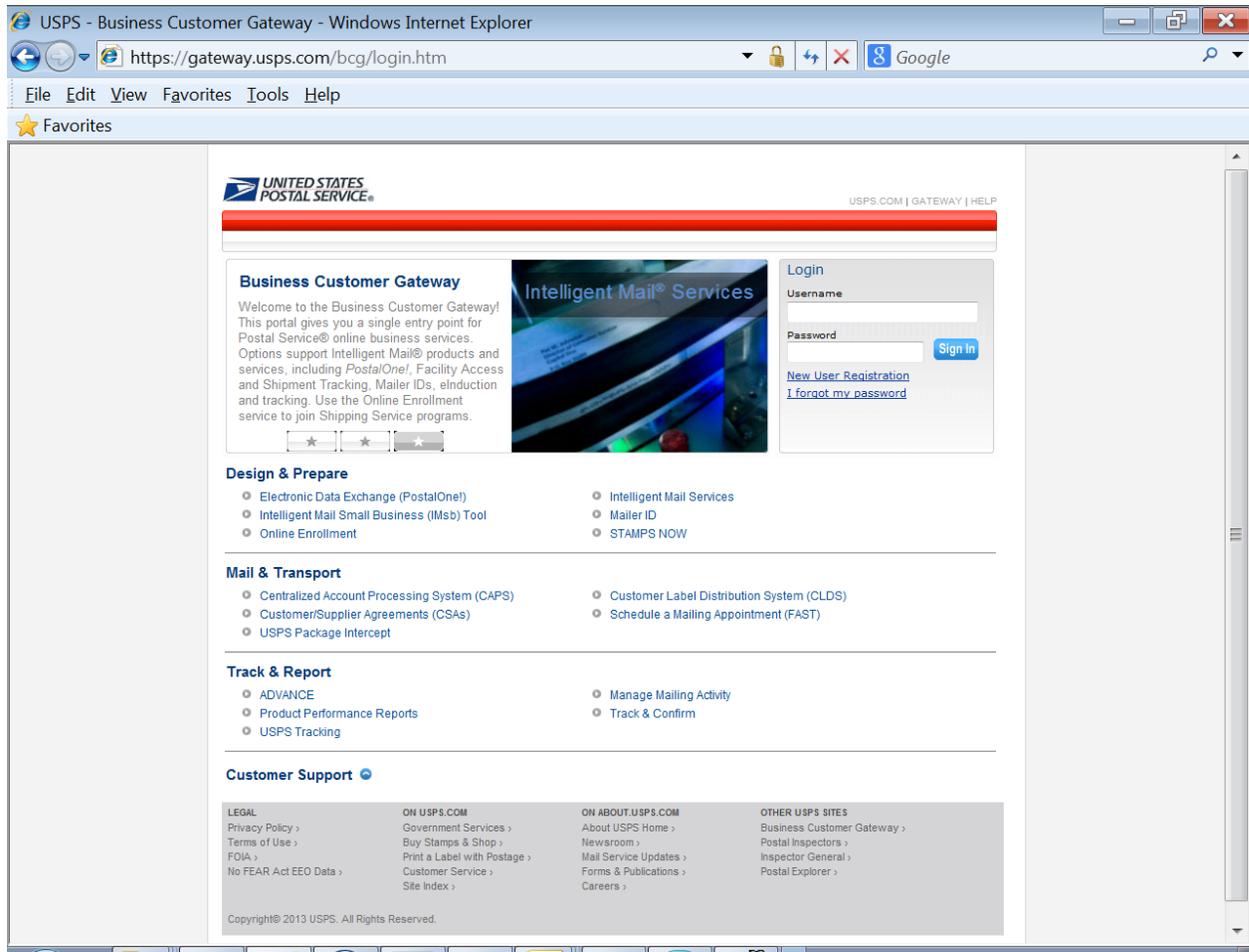

Figure 26: External user login page through Business Customer Gateway (BCG)

STEP 2 - Navigate through the home page by clicking on “Mailing Reports(PostalOne!)” under “Tools and Wizard” section.

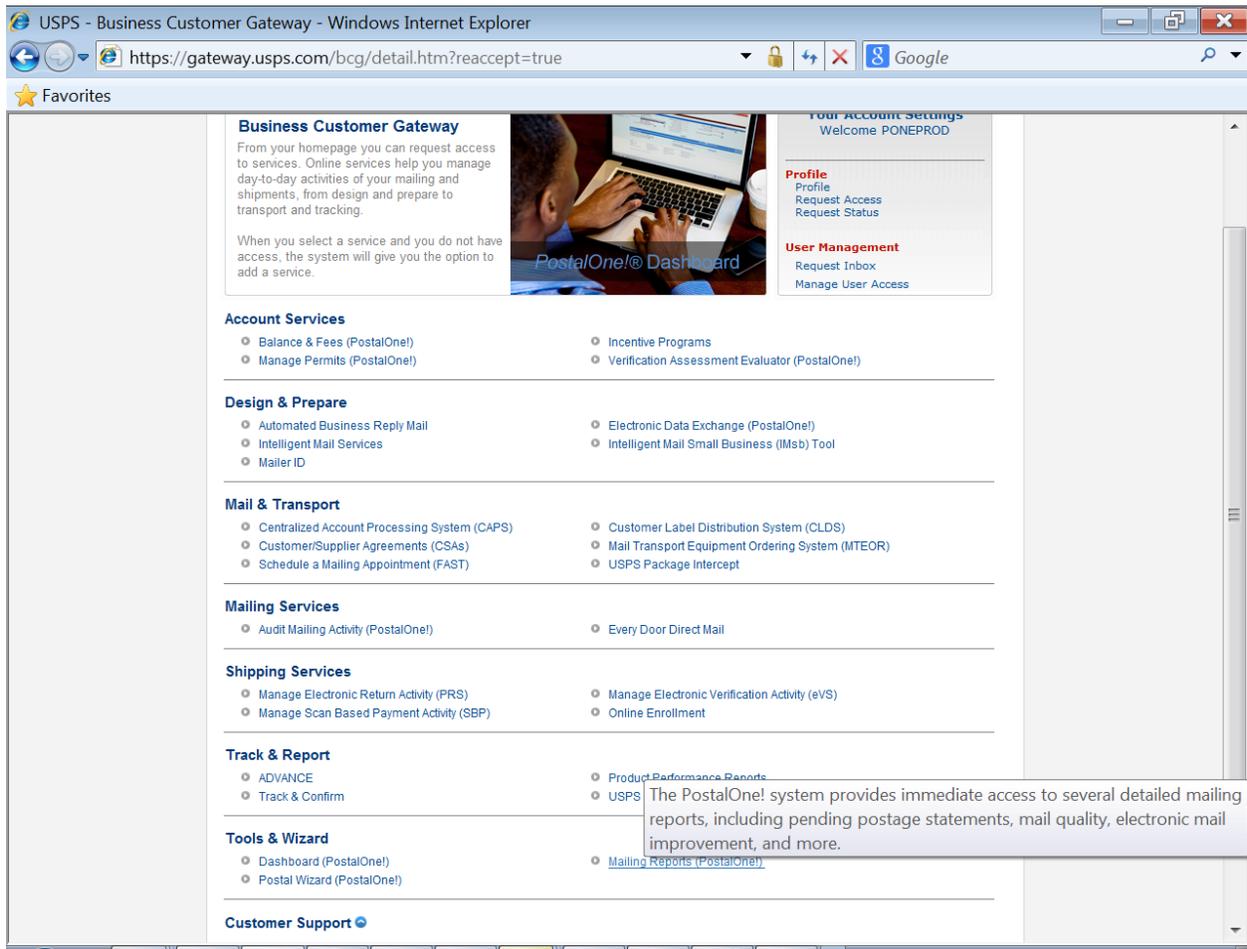

Figure 27: User Home Page

STEP 3 - Click the link "Push Subscription Profile" under "Full Service" section.

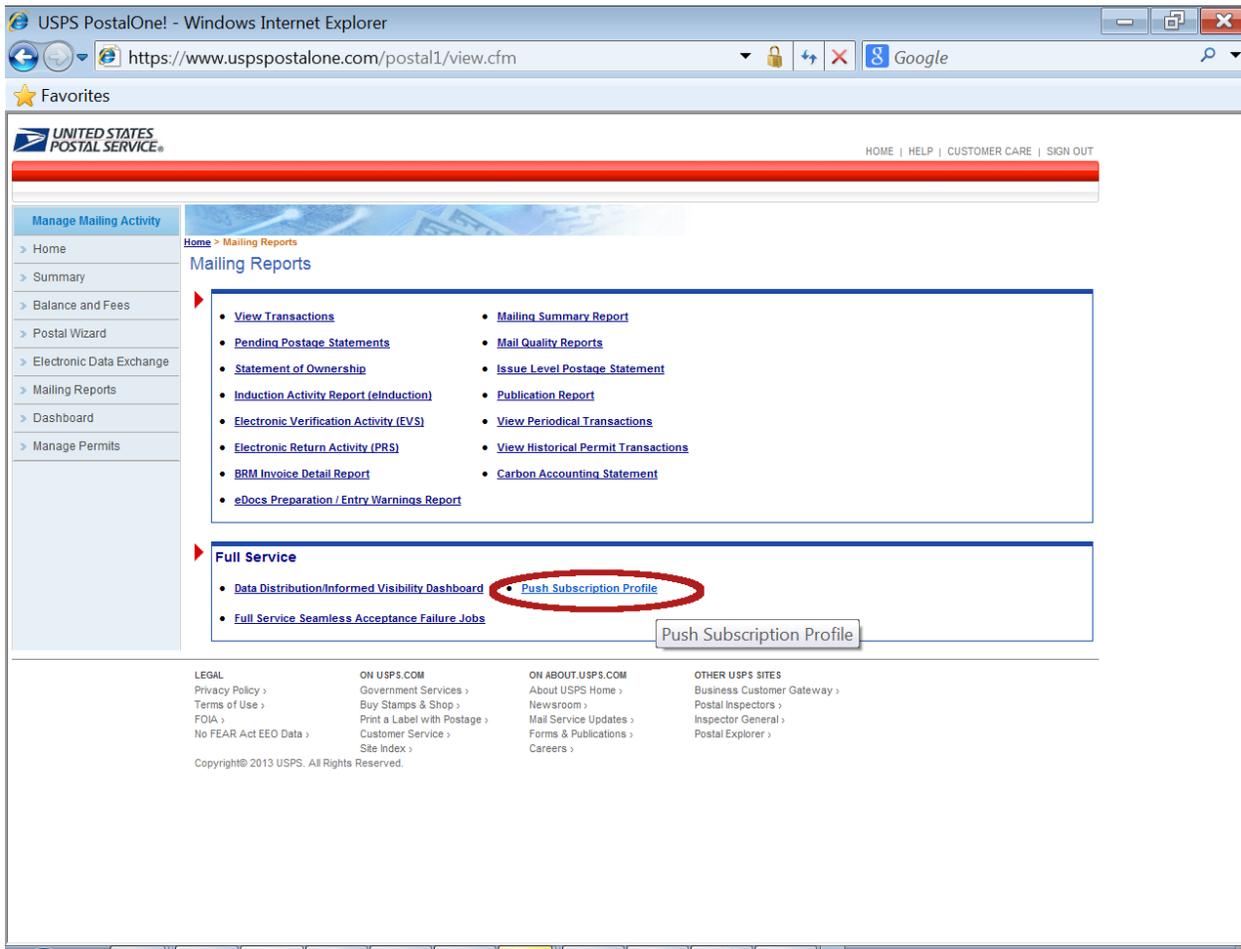

Figure 28: Mailing Reports Page

STEP 4 – Select a business entity (CRID) from the dropdown list for subscription.

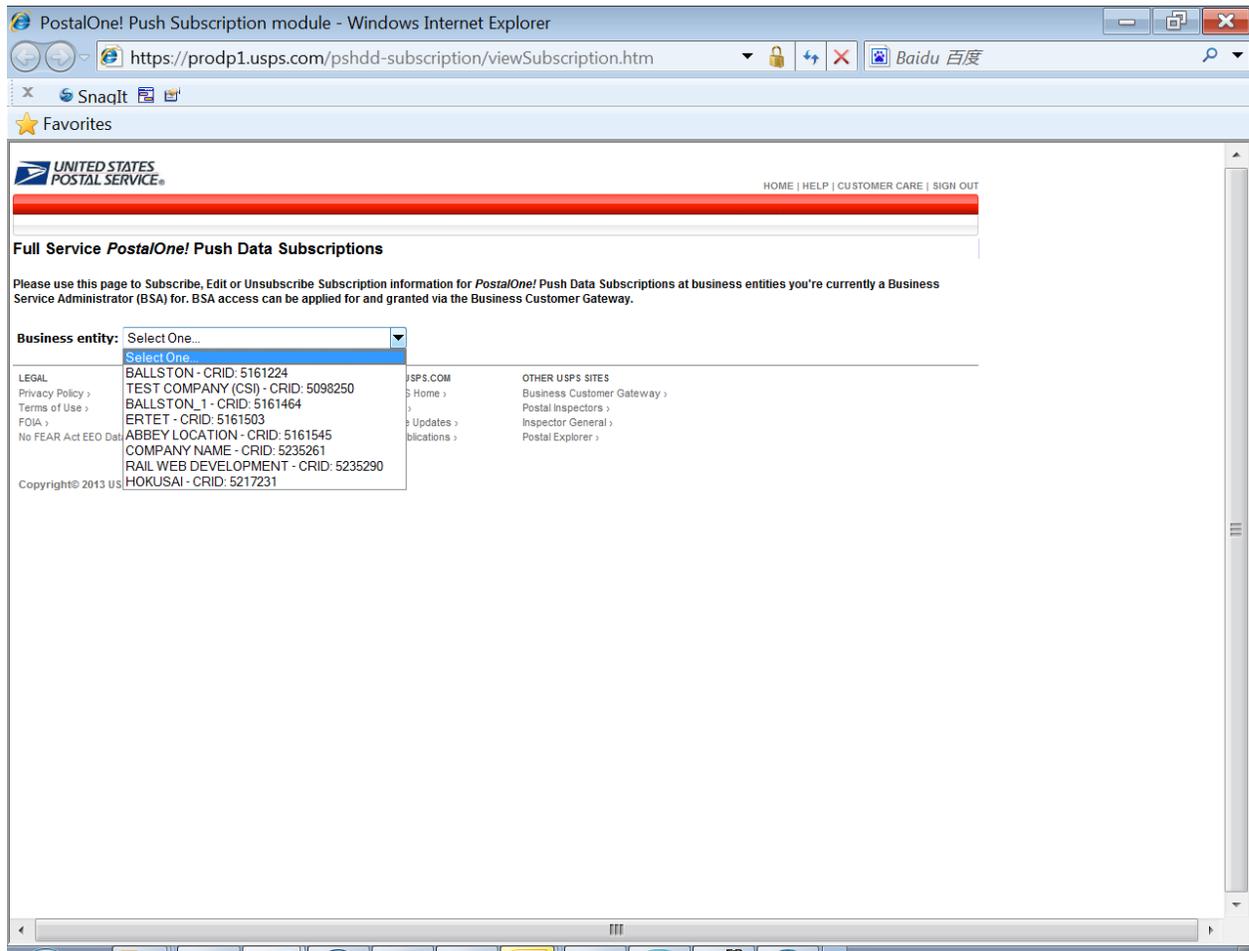

Figure 29: List of Business Entities (CRIDs) associated with the User

STEP 5 – Click on the “Push Data Type” to be subscribed, two available options for Informed Visibility data are “Container Visibility” and “Mail Piece Scan”.

3.2.1.2 *Push Message Examples*

Messages to expect through this subscription are:

- **ContainerVisibilityDelivery:** USPS sends this detail data delivery to the customer with all available ContainerVisibilityEntry
- **ContainerVisibilityDeliveryNotification:** USPS sends this notification to the customer and provides the Job information for the ContainerVisibilityEntry data that are available
- **MPSVisDelivery:** USPS sends detail data delivery to the customer for bundle visibility
- **MPSVisNotification:** USPS sends this notification to the customer for bundle visibility that is available

Note: The following schema is made available as a sample only. For actual details on the rules and data elements, please review the [Data Distribution guides for the current Full-Service release](#). See [Appendix J](#) for step-by-step instructions on how to obtain the latest guides.

3.2.1.3 ContainerVisibilityDelivery

USPS sends this detail data delivery to the customer with all available ContainerVisibilityEntry

</xs:element>
```

Figure 34: ContainerVisibilityDelivery XSD Text

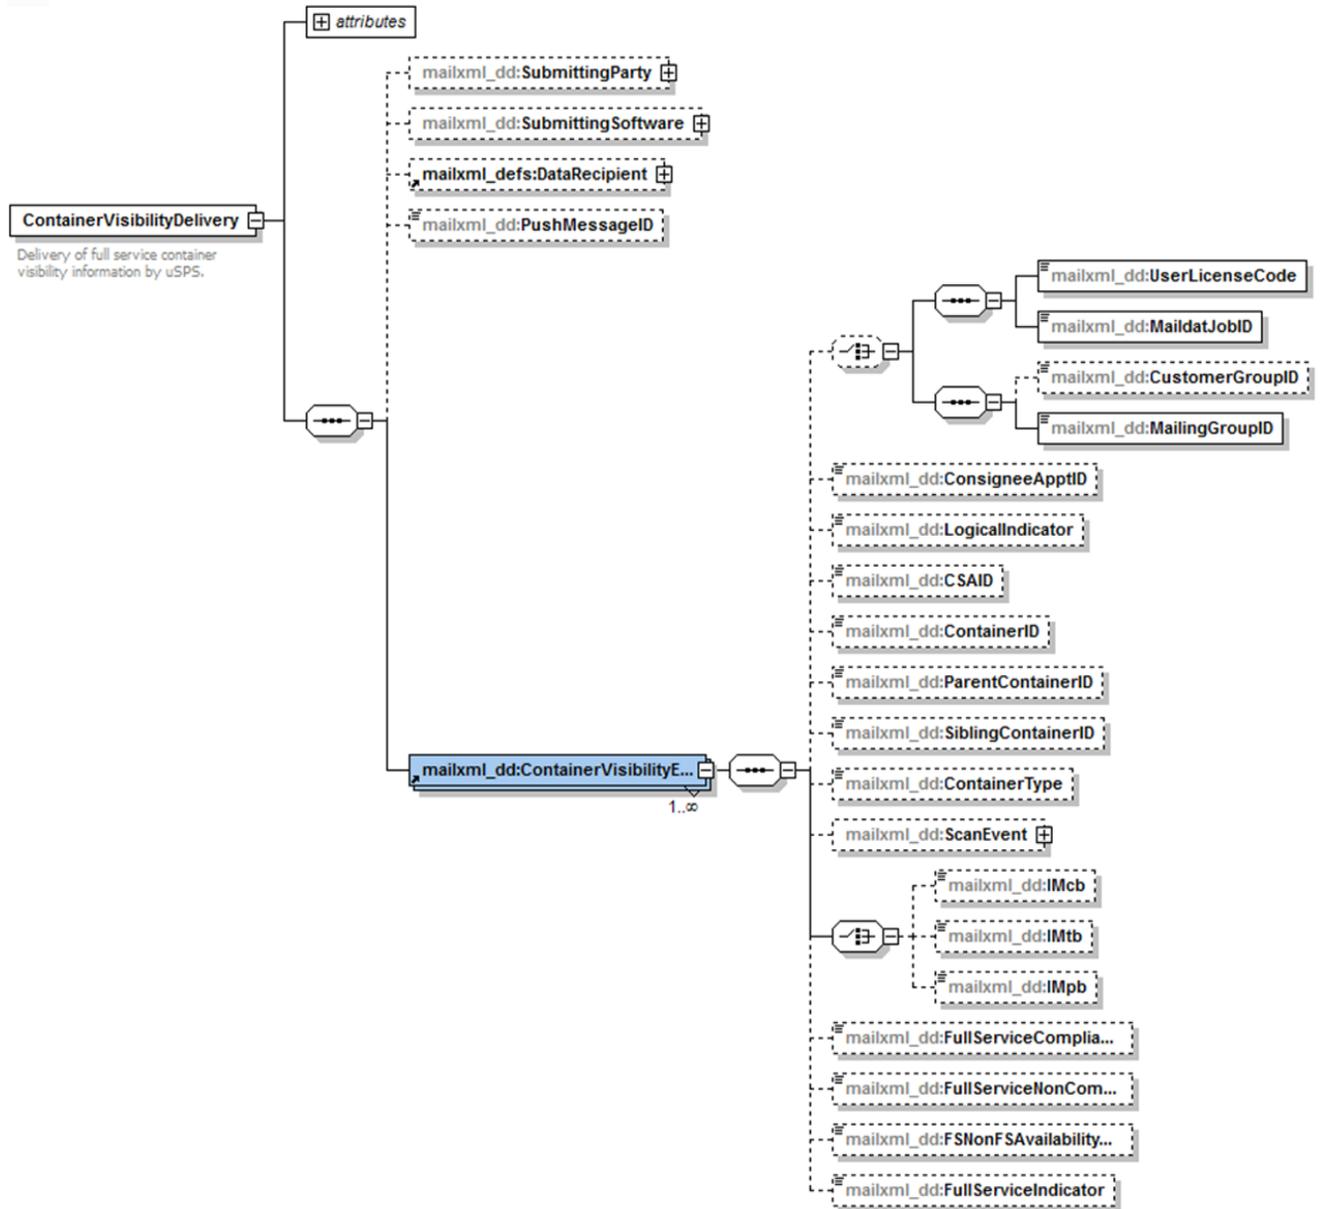

Figure 35: ContainerVisibilityDelivery XSD Schema

3.2.1.3.2 ContainerVisibilityDelivery Business Rules

With each ContainerVisibilityDelivery message, if the customer has registered with the PostalOne! system to receive the message, the PostalOne! system will provide the OPTIONAL LargeTransactionDividerGroupOptionalType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions, records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.

- MessageGroupID – It is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all

transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.

- TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, the X is a positive integer.
- MessageSerialNumber – Is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
- TransmittedRecordCount – is a count of records in the current message transaction.
- TotalRecordsAcrossMessages – This is the total expected record count when the receiver for the MessageGroupID has received all transactions.
- LastMessage – is a Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID. For example: MessageGroupID 10.

SubmittingParty – The PostalOne! system for all Notification and Delivery messages will always put a value of 'USPS' in the MaildatUserLicense field.

SubmittingSoftware – The PostalOne! system for all Notification and Delivery messages will always put

- a. The value of 'PostalOne' in the SoftwareName element
- b. The value of 'USPS' in the vendor element
- c. The most current version number available, such as 19.0 or 20.0 in the Version element
- d. The *PostalOne!* system will not fill any values in the ApprovalDate and ApprovalKey elements

The CRID element is for industry usage and is optional. For the Delivery messages, the PostalOne! system will not populate this element. The PostalOne! system will provide the job information, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML to the customer.

The PostalOne! system will send one or more ContainerVisibility blocks.

Electronic Shipping info Received - USPS received finalized electronic documentation

Entered at USPS - Container or Orphan Handling Unit inducted to USPS network (scan used for Start-the-Clock)

Enroute Arrive - Container or Tray arrived at a USPS facility or Airport

Enroute - Tray or Bundle was processed at a USPS facility on sorting equipment

Enroute Depart - Container or Tray departed a USPS facility or Airport

Full-service ACS™ COA and Nixie data grouping: All XML Messages for the Full-service ACS COA and Full-service ACS Nixie data are grouped by Mail.dat Job ID/User License Code OR Mailing Group/Container Group AND Data Recipient CRID. The data recipient CRID is attached to the Full-service ACS transactions by the SASP system based upon the eDoc By/For and/or the MID profile/Cast of Characters communication.

Table 12: MPSNotification Field Description

3.2.2 Pull Messages (Adhoc)

Customer sends a Web Services-based Mail.XML Request message invoking USPS Web Services to pull data in XML format through a Mail.XML Web Service method.

Messages involved in pulling scan data are:

- **ContainerVisibilityQueryRequest:** Customers can request container visibility information from USPS by providing the job information, appointment/trip information, facility id, container information or Intelligent Mail Container/Tray barcodes.
- **ContainerVisibilityQueryResponse:** USPS responds to customer's request with any available ContainerVisibilityEntry data
- **MPSVisQueryRequest:** Customers can request bundle visibility information from USPS
- **MPSVisQueryResponse:** USPS responds to customer's request with any available bundle visibility data

Note: The following schema is made available as a sample only. For actual details on the rules and data elements, please review the Data Distribution guides for the current Full-Service release. See Appendix J for step-by-step instructions on how to obtain the latest guides.

3.2.2.1 ContainerVisibilityQueryRequest

Customers can request container visibility information from USPS by providing the job information, appointment/trip information, facility id, container information or Intelligent Mail Container/Tray barcodes.

3.2.2.1.1 ContainerVisibilityQueryRequest Definition

The XML Schema Definition of ContainerVisibilityQueryRequest message is shown below:

```
<xs:element name="ContainerVisibilityQueryRequest">
  <xs:annotation>
    <xs:documentation>Query request for for full service container visisbility information.</xs:documentation>
  </xs:annotation>

  </xs:complexType>
</xs:element>
```

Figure 42: ContainerVisibilityQueryRequest XSD Text

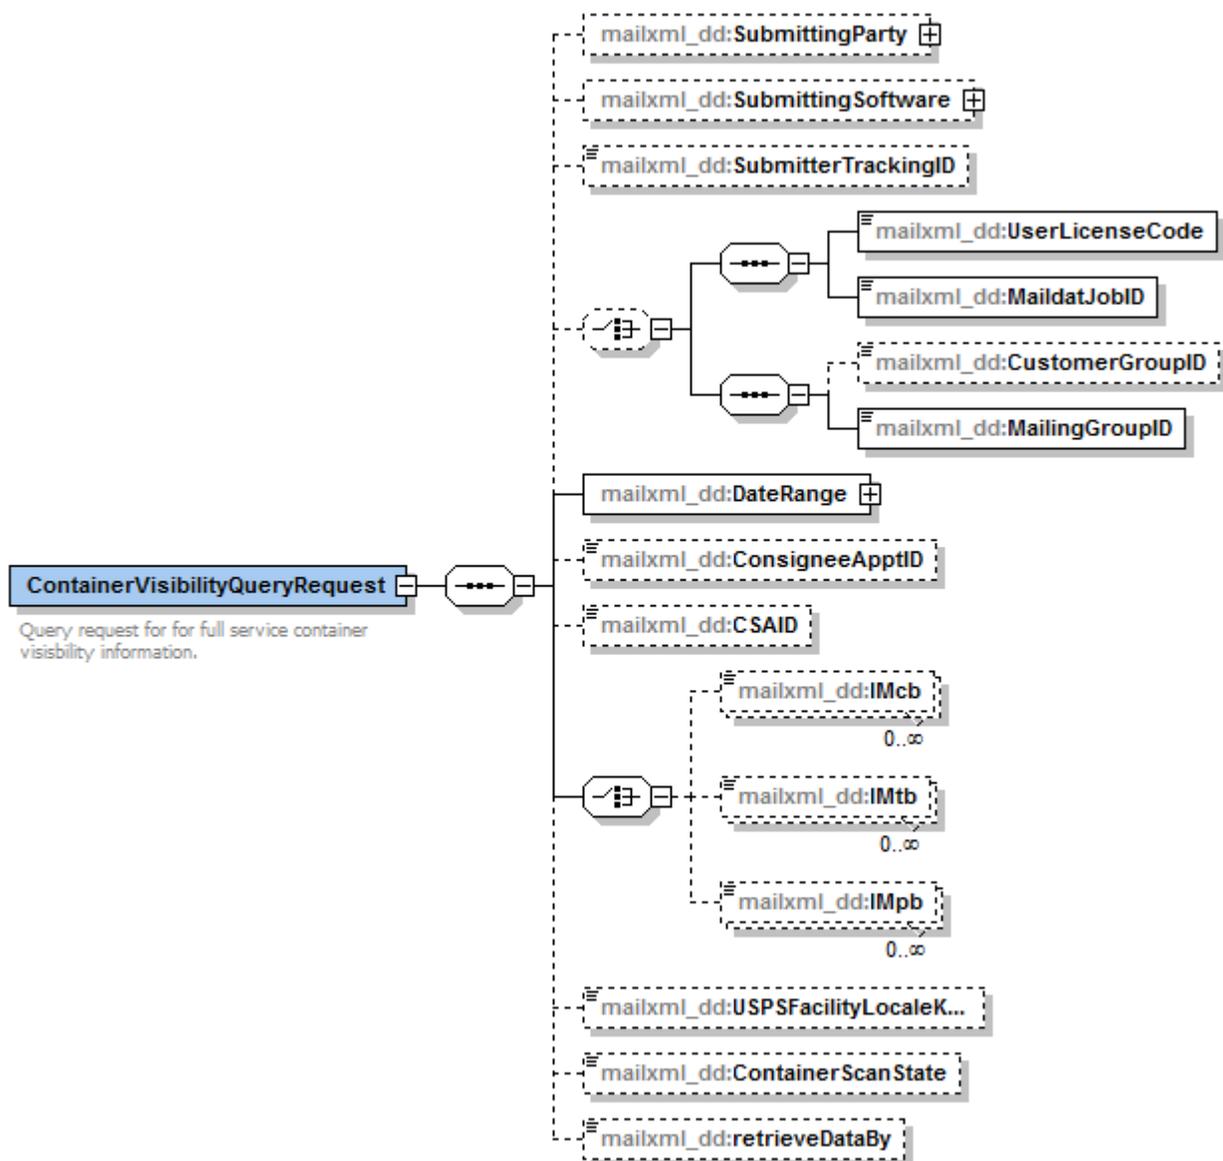

Figure 43: ContainerVisibilityQueryRequest XSD Schema

3.2.2.1.2 ContainerVisibilityQueryRequest Business Rules

With each ContainerVisibilityQueryRequest message, the customer needs to provide information for all required blocks.

1. SubmittingParty – The *PostalOne!* system for all data distribution for full-service messages, i.e., non-FAST, non-eDoc messages, will only accept a MID or a CRID as a valid id.
2. SubmittingSoftware – The *PostalOne!* system for messages that it receives for the Mail.XML will always require
 - a. A valid software name in the SoftwareName element
 - b. A valid software vendor company name in the vendor element
 - c. The most current version number of the software in the Version element

- d. A valid Approval Date and a valid Approval Key in the ApprovalDate and ApprovalKey elements. The approval date is the date when the USPS approved the software usage in the USPS production environment and a valid Approval Key is what the USPS provided to the Software Vendor or Mailer (who may have developed their own software) as authorization to use in all messages.
3. The job information can also be provided optionally, either the Mail.dat Job ID and User License Code, OR the Customer Group ID and MailingGroupID for Mail.XML by the customer.
4. The FAST appointment ID or the CSA Dispatch ID, created by the FAST system, can be provided optionally in the ConsigneeApptID or CSADispatchNumber elements respectively.
5. The customer can also optionally provide the 21-digit Pallet IMCB barcodes in the UniqueContainerBarcode element tied to the Mail.XML job information or Mail.dat Job information and can optionally provide the Locale Key of the Induction facility in the USPSInductionFacilityLocaleKey element.
6. The customer can also optionally provide the Mail.XML Container ID in the CustomerContainerID element tied to the Mail.XML job information or can optionally provide the Mail.dat ContainerID in the ContainerID element.

        <xs:element ref="mailxml_defs:QueryError"/>
      </xs:choice>
    </xs:sequence>
    <xs:attributeGroup ref="mailxml_defs:LargeTransactionDividerGroupOptionalType"/>
  </xs:complexType>
</xs:element>
```

Figure 45: ContainerVisibilityQueryResponse XSD Text

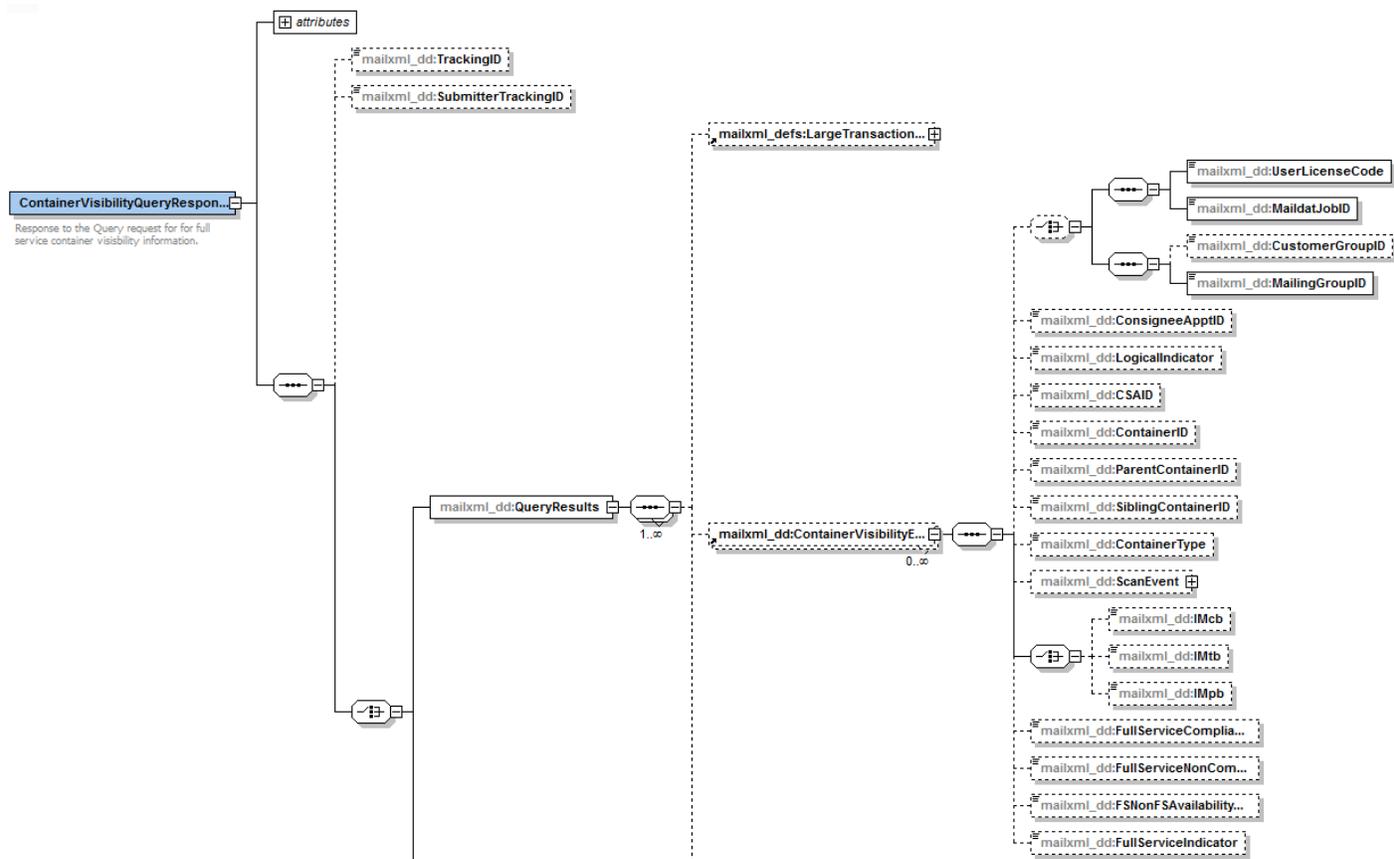

Figure 46: ContainerVisibilityQueryResponse XSD Schema

3.2.2.2.2 ContainerVisibilityQueryResponse Business Rules

With each ContainerVisibilityQueryResponse message the *PostalOne!* system will provide the

1. Mandatory LargeTransactionDividerGroupType. This type is created to allow breaking up of any large data into multiple transactions, with Feet Ahead concept, where the sender of the large data is providing information about how many total transactions and records to expect, and what is the current transaction number among the total expected transactions etc. as part of this one business transaction.
 - a. MessageGroupID – It is a Sequence Number and will remain the same until all the transactions are completed, e.g., MessageGroupID is 10 and until the last transaction is received on this business transaction, the MessageGroupID will remain 10 for all transactions, so the receiver knows that all the transactions with MessageGroupID 10 are one business transaction.
 - b. TotalMessageCount - This element tells the receiver that for MessageGroupID of 10 expect a total of X transactions, the X is a positive integer.
 - c. MessageSerialNumber – Is a serial number that will always start with 1 for every MessageGroupID, so the receiver always know if this is the 1st, 2nd, 3rd transaction from the TotalMessageCount and for the same MessageGroupID.
 - d. TransmittedRecordCount – is count of records in the current message transaction.
 - e. TotalRecordsAcrossMessages – This is the total expected record count when the

receiver of the MessageGroupID has received all messages.

- f. LastMessage – is an optional Yes or No indicator confirming for the receiver that this transaction is the last transaction of the MessageGroupID e.g., MessageGroupID 10.

The ContainerVisibilityQueryResponse has two major choice blocks. One is QueryResults and the other is QueryErrors.

In QueryResults,

The job information will be returned by the USPS *PostalOne!* system, and the Mail.dat Job information will be returned or Mail.XML job information will be returned. The Mail.dat Job ID and User License Code elements represent Mail.dat information and the Customer Group ID and MailingGroupID represent the Mail.XML.

The customer will receive zero or more ContainerVisibilityEntry blocks with container unload and scan information. The following Scan Types will be provided:

- Electronic Shipping info received - USPS received finalized electronic documentation
- Entered at USPS - Container or Orphan Handling Unit inducted to USPS network (scan used for Start-the-Clock)
- Enroute Arrive - Container or Tray arrived at a USPS facility or Airport
- Enroute - Tray or Bundle was processed at a USPS facility on sorting equipment
- Enroute Depart - Container or Tray departed a USPS facility or Airport
- Out for Delivery - Bundle departed Delivery Unit

The customer may also optionally receive Return Codes and Descriptions as part of the Query Results.

The QueryError Block provides zero or more return codes and descriptions to communicate any issues with the response of the query.

3.2.2.2.3 ContainerVisibilityQueryRequest Field Description

| ContainerVisibilityQueryResponse | | | | |
|--|-------------------------|--------------------------|---|---|
| Field | Format | Acceptable Values | Business Rules | Comments |

Appendix A: Change History

These are the changes from Version 3.0 (03/16/2013) to Version 3.1 (03/24/2014).

| Section # | Title | Description |
|-----------|--|--|
| 3.1.3 | Informed Visibility Search Page | Added missing number for “Out for Delivery” Scan State. |
| 3.1.5 | Informed Visibility Downloaded Report | Updated values for “Enroute Arrive” from ‘5’ to ‘3’. Updated value for “Enroute Depart” from ‘3’ to ‘5’. Added missing value for “Out for Delivery”. |
| 3.2.2.2.2 | ContainerVisibility-QueryResponse Business Rules | Updated descriptions for Scan State values. |
| 3.2.2.4.1 | ContainerVisibility-Delivery Business Rules | Updated descriptions for Scan State values. |

Table 17: Change History for Version 3.1

These are the changes from Version 2.0 (10/15/2012) to Version 3.0 (03/16/2013).

| Section # | Title | Description |
|------------|---|--|
| Entire | Page Numbering | Added page numbering |
| Entire | Format | Made format changes |
| Entire | Name Change | From: Quick Start User Guide Informed Visibility with Mail.XML™ and PostalOne! To: Container, Tray, and Bundle Visibility User Guide (subtitle: Informed Visibility with Mail.XML™ and PostalOne! Reports) |

Appendix F: Frequently Asked Questions (FAQs)

Q: Can I obtain container, tray, and bundle scan data for Basic mailings?

A: At this time, container and tray scan data are only provided for Full Service mailings. Some bundle scan data can be obtained through IMb Tracing. This scan data is limited to automation (enroute) scans captured as bundles are processed on mail processing equipment (MPE), and does not include handheld scans.

Q: Do I have to use Mail.XML to obtain container, tray, and bundle visibility data?

A: No, customers can obtain the same data through *PostalOne!* reports. See Section 3.1 for information on how to access Informed Visibility reports through the *PostalOne!* Data Distribution Dashboard.

Q: How do I get started with Mail.XML?

A: Please refer to Appendix G: TEM Access, and for further information, look to the *eDoc and Full-Service Authorization Guide for Mail.XML* available at https://ribbs.usps.gov/intelligentmail_guides/documents/tech_guides/temguides/eDocFullServiceAuthorizationMailXML.pdf and/or the *Test Environment for Mailers (TEM): Checklist and Troubleshooting* guide available at https://ribbs.usps.gov/intelligentmail_gateway/documents/tech_guides/TEMCHECKLIST.pdf

Q: How do I subscribe to XML Messages?

A: A customer can create a Push Subscription via the *PostalOne!* Business Customer Gateway at <https://gateway.usps.com/bcg/login.htm> by navigating to **Home > Mailing Reports (PostalOne!) > Full-Service > Push Subscription Profile**. See Section 3.2.1.1 for step-by-step instructions.

Q: I am having difficulties accessing the Informed Visibility Reports. Who can I reach out to for assistance?

A: Please contact the *PostalOne!* Customer Care Center at (800) 522-9085 or postalone@usps.gov, or go to <http://www.usps.com/postalone/contact.htm>

Q: I seem to be receiving duplicate XML messages for scans. Why is this happening?

A: When a new event is captured, the full scan history will be re-sent in the XML message. Previously-received events will not be updated.

Q: Can I filter out the electronic information received events?

A: Push messages, available through subscription via the Push Subscription Profile page on *PostalOne!*, allow filtering container visibility data by scan event type. The 'ContainerVisibilityEntry' block, which is returned for both Push and Pull message, shows the 'ScanState' element, which can be used to determine the type of event. A value of "1" indicates an 'electronic information received' event. Please note that for Mail.XML versions prior to 11.0.D, the 'ContainerVisibilityEntry' block does not contain the 'ScanState' element. The Electronic Information Received event will not be included in Bundle scan data.

Appendix G: TEM (Test Environment for Mailers) Access

Please find below an abbreviated version of the 'The Checklist' from the TEM Checklist and Troubleshooting - Version 2.0.2 (please reference the original document for further information https://ribbs.usps.gov/intelligentmail_gateway/documents/tech_guides/TEMCHECKLIST.pdf):

1. Comply with barcode requirements

- a. Complete information on Intelligent Mailpiece barcode compliance can be found at <https://ribbs.usps.gov/index.cfm?page=intellmailsuite>.
- b. All barcodes must be unique within a 45-day period and be unique on the following lengths:
 - i. IMcb (container barcode) – 21 digits
 - ii. IMtb (tray/sack barcode) – 24 digits
 - iii. IMb (piece barcode) – 20, 25, 29, or 31 digits

2. Gain access to the Business Customer Gateway

- a. Register online for a Business Account
- b. Request Services
 - i. Manage Mailing Activity
 - ii. Mailer ID
 - iii. Schedule a Mailing Appointment (FAST) – if necessary
 - iv. Customer/Supplier Agreements (CSAs) – if necessary
- c. Mailer ID

3. Complete the Mail.XML Test Environment for Mailers (TEM) preparation

- a. FAST Business-based (Transportation Service Providers and related vendors)
- b. Mail.XML TEM Worksheet - Customer Identification Form
 - i. Complete FAST Web Services Mail XML Testing Survey and submit it to the *PostalOne!* Help Desk
- c. Complete the Mail.XML TEM Worksheet - Customer Identification Form
 - i. Email as an attachment to the *PostalOne!* IT Data Distribution Team and the *PostalOne!* Help Desk
- d. Full-Service Data Distribution
 - i. Pull Method
 - Set up host server and Web Services URLs.
 - Select the 'Verify Web Service in TEM' link in TEM
 - Configure software with expected error codes that are returned in Mail.XML Messages by the USPS
 - download and setup the latest version of WSDL in your web service software and link with the Mail.XML XSD types
 - download and setup USPS® provided user authentication XSD in your web service software

- Obtain confirmed Web Service activation from the PostalOne! IT Data Distribution Team
- For Pull data distribution messages, obtain and use test data usernames and passwords from the PostalOne! Help Desk to use datasets

ii. Push Method

- Acquire a signed certificate from either VeriSign or Comodo certificate authority to enable SSL communication with USPS and setup the SSL certificate on the servers that will receive data from USPS® Servers
- Ensure your Web Service end point to support SSL data communication with USPS TEM servers
- Build your Web Services using the published WSDL
- Complete Section 1 and 2 of the TEM Full-Service Data Feedback using Push Messages – Customer Identification Form and submit to the PostalOne! IT Data Distribution Team and the PostalOne! Help Desk
- Register your Web services end point with USPS to receive data push in TEM environment by setting up push subscription profile in the TEM environment at the Business Customer Gateway

(<https://gateway.usps.com/bcg/login.htm>):

- 1) Log in
- 2) Click “Electronic Data Exchange (PostalOne!)” link under the “Design & Prepare” section
- 3) Click “Go to TEM” under “PostalOne! Postal Wizard” section of “Test Environment for Mailers (TEM)” table
- 4) Click “Mailing Reports” menu on the left
- 5) Click “Push Subscription Profile” link under “Full Service” table

Refer to the User Access to Electronic Mailing Information and Reports Guide Volume II (Push Subscription Profile).

- 1) Enter a Push type: Notification or Delivery
 - 2) Enter the User ID (your Web Service user ID)
 - 3) Enter the password (your Web Service password)
 - 4) Confirm the password
 - 5) Enter web service URL
 - 6) Enter a Push active date
 - 7) Enter a frequency
 - 8) Select the Mail.XML Version
 - 9) Click submit
- Notify PostalOne! IT Data Distribution Team once you have registered push subscription in TEM and work with the PostalOne! IT Data Distribution Team to test connectivity to your servers that will receive the Push calls from the USPS TEM servers.
 - Send an email request for the production approval to the PostalOne! Help Desk upon completing successful test with USPS TEM servers. In that email, attach the sample test messages successfully received by your Web Service.
 - Wait for the formal email approval from the PostalOne! Help Desk

- Register your push subscription profile in production environment via Business Customer Gateway
(<https://gateway.usps.com/bcg/login.htm>):
 - 1) Log in
 - 2) Click “Mailing Reports (PostalOne!)” link under the “Tools & Wizard” section
 - 3) Click “Push Subscription Profile” link under “Full Service” table
- Notify PostalOne! IT Data Distribution Team once you have registered push subscription in production so that it can be enabled for push message delivery at the specified intervals registered in your push subscription profile.

4. Enter the Test Environment for Mailers (TEM)

a. Mail.dat

- i. Log in to the Business Customer Gateway before logging into the *PostalOne!* Mail.dat Client
- ii. Download and extract the Mail.dat Client software
- iii. Double click the MDRClient.dat and log into the client application with your existing Gateway logon information
- iv. Click the Job Validation/Upload tab and add jobs to be validated or uploaded
- v. Click on the Home tab and select a valid date and range to submit with Mail Facility ID box checked
- vi. A list of jobs will be displayed
- vii. Double click on the job ID and a detailed error screen will display which includes the Message Description, Message Type, Field Name, and Position.
- viii. Email the following to the *PostalOne!* Help Desk: Email Subject Line: Mail.dat 09-1 (or 08-2) [*Company Name*] Test Scenario X. In the body of the email, include: Company Name, Address, City, State, ZIP Code, CRID, Contact Name, Phone Number, and the function appended by an F (Full-Service) or B (Basic w/ eDoc).
- ix. Perform the required test scenario files.

b. Mail.XML

- i. Email the following to the *PostalOne!* Help Desk: Email Subject Line: Mail.XML 8.0 (or 7.0) [*Company Name*] Mail.XML TEM Worksheet. It is recommended to test one function at a time, i.e., FAST, eDoc, or Data Feedback. In the body of the email, include: Company Name, Address, City, State, ZIP Code, CRID, Contact Name, Phone Number, and the function appended by an F (Full-Service) or B (Basic w/ eDoc).
- ii. Perform the required test scenario files
- iii. Complete the Test Scenario Results Worksheet and submit to the PostalOne! IT Data Distribution Team and the PostalOne! Help Desk
- iv. Email TEM Results Worksheet as an attachment, include evidence i.e., if you were successful with a Create Request, save the response.

c. Wait for TEM Assessment when all scenarios have been successfully completed

- Receive email from *PostalOne!* Help Desk with Subject: Mail.XXX PASSED – Official *PostalOne!*® Enrollment of COMPANY X, Notification

of TEM File Validation Completion Customer X. The email conveys: “Your software has been validated to support the eDoc specification and has passed the Official PostalOne!® Enrollment in the TEM.”

- **For Mail.dat**, the email from the *PostalOne!* Help Desk is an acknowledgement conveying MAIL.dat Specification OFFICIAL AUTHORIZATION TO PROCEED IN THE PRODUCTION ENVIRONMENT.
- **For Mail.XML**, the email from the *PostalOne!* Help Desk is an acknowledgement email conveying MAIL.XML OFFICIAL AUTHORIZATION TO PROCEED IN THE PRODUCTION ENVIRONMENT.

d. PARALLEL TESTING (Software Vendor)

- i. Receive email from PostalOne! Help Desk with Subject: Mail.XXX PASSED – Official PostalOne!® Enrollment of COMPANY X, Notification of TEM File Validation Completion to Software Customer X

e. Existing eDoc Mailers:

- i. *PostalOne!* Help Desk will notify Mailer (via email) and cc Business Mail Entry (BME) or Business Mailer Support (BMS) with test validation

f. New eDoc Mailers:

- i. If parallel testing is required, the BMS will contact new eDoc mailers who complete the required testing in TEM. The following are subject to parallel testing:
 - Weigh Verified mailers – HQ TEM Team will notify Mailer and copy the *PostalOne!* Help Desk and Business Mail Entry (BME).
 - Postage Payment System mailers – Receive BMS Authorization. (BMS will run parallel test for the special postage payment systems and then authorize customer to submit files for Production).

5. Establish Data Distribution Controls (required for Full-Service)

- a. Comply with By/For section of the electronic documentation
- b. Use the Mailer ID system and/or Push Subscription Profile through the Business Customer Gateway.
 - i. Set-up Data Distribution to recipients (use Mailer ID System). Follow these steps if you are the Mail Owner or Preparer and plan to distribute data.
 - ii. If you are the Mail Owner or Mail Preparer and data distribution is planned for Third Party:
 - Obtain Third Party MID: _____
 - Establish Data Recipient Profile in Mailer ID System
 - a. None (default)
 - b. To Preparer
 - c. To MID on mailpiece
 - d. Single Recipient
 - e. Multiple Recipient
 - Submit Cast-of Characters messages

- Full-Service ACS data includes Change of Address (COA) and Nixie information and is provided to the Mail Owner by default and Start-the-Clock and Container Visibility data is provisioned to the Mail Owner and the Mail Preparer as indicated in the info block
 - Determine data receipt method:
 - a. Online downloadable reports
 - b. Mail.XML pull (retrieve when Response message is received from USPS)
 - c. Mail.XML push (use Push Subscription Profile)
- iii. If PUSH method will be used in Production follow these steps.
- Download Production WSDL(s) and XSDs, Go to (http://ribbs.usps.gov/intelligentmail_guides/documents/tech_guides/xmlspec/xmlspec.htm).
 - Enable support to SSL communication between your Web Service end point and USPS Production environment servers using the published WSDLs. USPS supports signed certificates obtained from VeriSign and Comodo.
 - Complete and submit the TEM Full-Service Data Feedback using Push Messages – Customer Identification Form to the *PostalOne!* IT Data Distribution Team to the *PostalOne!* IT Data Distribution Team and the *PostalOne!* Help Desk
 - Register your web services end point(s) with USPS to receive data push in PRODUCTION environment
 - Work with the *PostalOne!* IT Data Distribution Team to obtain the signed (SSL) security certificate to be set up on servers that will receive the Push calls from the USPS servers for the Production environment
 - Receive notification by USPS from the *PostalOne!* IT Data Distribution Team that connectivity is complete
 - In Web services server software, set up (Production) 'User ID' and 'Password' with a USPS code for User License Code Note: Obtain the User License Code from mail preparer or the entity who will submit original Mail.dat files in the Production environment
 - Set up this information on the subscription profile at the Business Customer gateway> Mailing Reports > Push Data Subscription
 - a. *Enter a Push type: Notification or Delivery*
 - b. *Enter the User id (use your Business Customer Gateway log in ID)*
 - c. *Enter your password (use your Business Customer Gateway log in ID)*
 - d. *Confirm your password*
 - e. *Enter your Web Service URL for the production environment*
 - f. *Enter a Push date*
 - g. *Enter a frequency (six, twelve or twenty four hours)*
 - h. *Select the Message Version to be supported*

i. Click submit

- PostalOne! will not be able to send messages to the mailer if the certificate has expired when the SSL communication cannot be authenticated

6. Enter the Production environment

- a. Proceed in the Production environment only after receiving the email OFFICIAL AUTHORIZATION TO PROCEED IN THE PRODUCTION ENVIRONMENT

Appendix H: Extract of Mail.XML 12.0B Complex and Attribute Groups Definitions

The definitions contained within this appendix are an extract from the Mail.XML 12.0B Complex and Attribute Groups Definitions. Please see the latest Data Distribution guide (see Appendix J for instructions to obtain guide) for a full list of complex and attribute groups definitions.

1.1 Complex Type: ContainerVisibilityEntry

| Complex Type: ContainerVisibilityEntry | | | | |
|--|--|-------------------|--------------------------------|--|
| Field | Format | Acceptable Values | Business Rules | Comments |
| ContainerVisibilityEntry BEGINS | | | | |
| Choice Block BEGINS | - | - | Optional | - |
| UserLicenseCode | userLicenseCodeType simple type | - | Required when Mail.dat is used | Refer to this simple type in Appendix J |
| MaildatJobID | jobIDType simple type | - | Required when Mail.dat is used | Refer to this simple type in Appendix J |
| CustomerGroupID | String 25 | - | Optional | - |
| MailingGroupID | nonNegativeInteger | - | Required | - |
| Choice Block ENDS | | | | |
| ConsigneeApptID | String 12 | - | Optional | - |
| LogicalIndicator | mailxml_base:yesNo | | Optional | Refer to this simple type in Appendix J |
| CSAID | mailxml_base:s10 | | Optional | Refer to this simple type in Appendix J |
| ContainerID | String 6 | | Optional | Refer to this simple type in Appendix J |
| ParentContainerID | String 6 | | Optional | Refer to this simple type in Appendix J |
| SiblingContainerID | String 6 | | Optional | Refer to this simple type in Appendix J |
| ContainerType | mailxml_base:mailXMLContainerType | | Optional | Refer to this simple type in Appendix J |
| ScanEvent | mailxml_dd: ScanEventType | | Optional | Refer to this Complex type in Appendix I |
| Choice Block BEGINS | | | | |

| Complex Type: ContainerVisibilityEntry | | | | |
|--|--|-------------------|----------------|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| IMcb | mailxml_base:IMcbType | | Optional | Refer to this simple type in Appendix J |
| IMtb | mailxml_base:IMtbType | | Optional | Refer to this simple type in Appendix J |
| IMpb | mailxml_base:IMpbType | | Optional | Refer to this simple type in Appendix J |
| Choice Block ENDS | | | | |
| FullServiceComplianceIndicator | fullServiceComplianceIndicatorType simple type | - | Optional | Refer to this simple type in Appendix J |
| FullServiceNonComplianceReasonCode | reasonCodeType simple type | - | Optional | Refer to this simple type in Appendix J |
| FSNonFSAvailabilityDate | Date | - | Optional | - |
| FullServiceIndicator | mailxml_base:yesNo | | Optional | Refer to this simple type in Appendix J |
| ContainerVisibilityEntry ENDS | | | | |

1.2 Complex Type: ContainerErrorWarningBlockType

| Complex Type: ContainerErrorWarningBlockType | | | | |
|--|----------------------|------------------|----------------|---|
| Field | Format | Acceptable Value | Business Rules | Comments |
| ContainerErrorWarningBlockType BEGINS | | | | |
| ConsigneeContainerGroupingID | String 16 | | Optional | - |
| ConsigneeContentID | String 12 | - | Optional | - |
| ShipperContainerGroupingID | String 16 | - | Optional | - |
| IMcb | IMcbType simple type | - | Optional | Refer to this simple type in Appendix J |
| IMtb | IMtbType simple type | - | Optional | Refer to this simple type in Appendix J |
| IMpb | IMpbType simple type | - | Optional | Refer to this simple type in Appendix J |
| MailContentName | String 30 | - | Optional | - |
| SchedulerContentID | String 12 | - | Optional | - |

1.3 Complex Type: DataRecipient

| Complex Type: DataRecipient |
|-----------------------------|
|-----------------------------|

| Field | Format | Acceptable Values | Business Rules | Comments |
|-------|--------------------------------|-------------------|----------------|---|
| CRID | CRIDType simple type | - | Required | Refer to this simple type in Appendix J |
| Roles | roleType simple type | - | Required | Refer to this simple type in Appendix J |

1.4 Complex Type: IMbMailpieceScanData

| Complex Type: IMbMailpieceScanData | | | | |
|------------------------------------|---|-------------------|----------------|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| Sequence Block BEGINS | | | Optional | |
| Choice Block BEGINS | | | | |
| Sequence Block ENDS | | | | |
| UserLicenseCode | mailxml_base:userLicenseCodeType | | | Refer to this simple type in Appendix J |
| MaildatJobID | mailxml_base:jobIDType | | | Refer to this simple type in Appendix J |
| Sequence Block ENDS | | | | |
| Sequence Block BEGINS | | | | |
| CustomerGroupID | mailxml_base:s25 | | | Refer to this simple type in Appendix J |
| MailingGroupID | nonNegativeInteger | | Optional | |

| Choice Block ENDS | | | | |
| MPSCount | nonNegativeInteger | | | |
| Sequence Block BEGINS | | | Unbounded | |
| IMbScanRec | mailxml_base:s200 | | Unbounded | See pipe-delimitation below |
| Sequence Block ENDS | | | | |
| IMbMailpieceScanData ENDS | | | | |

IMbScanRec

IMBCode(31) | PackageID(6) | USPSFacilityLocaleKey(6) | ScanDateTime(30) | ScanState(1) | BundleScanType(1) | OperationsCode(3)

ScanState: The enumeration values for **ScanState** are 4 and 6.
4 = Enroute

6 = Out for Delivery

BundleScanType: The enumeration values for **BundleScanType** field are 1 and 2.
 1 = Yes (Assumed)
 2 = No (Actual)

Refer to Appendix H and Appendix I for further details on the data types of other fields

1.5 Attribute Group: LargeTransactionDividerResult

| Attribute Group: LargeTransactionDividerResult | | | | |
|--|------------------|-------------------|----------------|----------|
| Field | Format | Acceptable Values | Business Rules | Comments |
| LargeTransactionDividerResult BEGINS | - | - | - | - |
| TrackingID | String 20 | - | Required | - |
| LargeTransactionDividerResult ENDS | - | - | - | - |

1.6 Attribute Group: LargeTransactionDividerGroupType

| Attribute Group: LargeTransactionDividerGroupType | | | | |
|---|--------------------------|-------------------|--|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| MessageGroupID | String, Length 20 | - | Required | - |
| TotalMessageCount | Positive Integer | - | Required | - |
| MessageSerialNumber | Positive Integer | - | Required | - |
| TransmittedRecordCount | Positive Integer | - | Required | - |
| TotalRecordsAcrossMessages | Positive Integer | - | Required | - |
| LastMessage | yesNo simple type | - | Optional Default is set to "NO" | Refer to this simple type in Appendix J |

1.7 Attribute Group: LargeTransactionDividerGroupOptionalType

| Attribute Group: LargeTransactionDividerGroupOptionalType | | | | |
|---|--------------------------|-------------------|----------------|----------|
| Field | Format | Acceptable Values | Business Rules | Comments |
| MessageGroupID | String, Length 20 | - | Optional | - |

| Attribute Group: LargeTransactionDividerGroupOptionalType | | | | |
|---|--------------------------|-------------------|--|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| TotalMessageCount | Positive Integer | - | Optional | - |
| MessageSerialNumber | Positive Integer | - | Optional | - |
| TransmittedRecordCount | Positive Integer | - | Optional | - |
| TotalRecordsAcrossMessage | Positive Integer | - | Optional | - |
| LastMessage | yesNo simple type | - | Optional Default is set to "NO" | Refer to this simple type in Appendix J |

1.8 Complex Type: basicReturnInfo

| Complex Type: basicReturnInfo | | | | |
|-------------------------------|--|-------------------|-----------------------------------|--|
| Field | Format | Acceptable Values | Business Rules | Comments |
| Sequence Block BEGIN | | | Optional 0 to many allowed | |
| Return Code | Numeric String – Length 4 | - | Optional | |
| Return Description | String, Length 260 | - | Required | |
| ContainerErrorWarningBlock | containerErrorWarningBlockType complex type | - | Optional | Refer to this complex type in Appendix I |
| Sequence Block END | | | | |

1.9 Complex Type: SubmittingParty, participantIDType

| Complex Type: SubmittingParty, participantIDType | | | | |
|--|--------------------------------|-------------------|---|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| MailerID6 | mailID6Type simple type | | Not required (attribute) Either MailerID6 or MailerID9 can be provided, not both | Refer to this simple type in Appendix J |
| MailerID9 | mailID9Type | | Not required (attribute) Either MailerID6 or MailerID9 can be provided, not both | Refer to this simple type in Appendix J |

| Complex Type: SubmittingParty, participantIDType | | | | |
|--|--|-------------------|--|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| CRID | CRIDType | | Not required (attribute), Either CRID or MID can be provided for authorization | Refer to this simple type in Appendix J |
| SchedulerID | String, 12 | | Optional | |
| MaildatUserLicense | userLicenseCodeType simple type | | Optional | Refer to this simple type in Appendix J |
| ShippingAgentID | String 12 | - | Optional | - |
| ReceivingAgentID | String 12 | - | Optional | - |

1.10 Complex Type: SubmittingSoftware

| Complex Type: SubmittingSoftware | | | | |
|----------------------------------|--------|-------------------|----------------|--|
| Field | Format | Acceptable Values | Business Rules | Comments |
| SoftwareName | String | | Required | |
| Vendor | String | | Required | |
| Version | String | | Required | |
| ApprovalDate | Date | YYYY-MM-DD | Optional | Changed the type to 'Date' based on errata |
| ApprovalKey | String | | Optional | |

1.11 Complex Type: ScanEventType

| Complex Type: ScanEventType | | | | |
|------------------------------|-----------------------------------|-------------------|------------------|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| Sequence Block BEGINS | | | Unbounded | |
| USPSFacilityLocaleKey | mailxml_base:localeKeyType | | Optional | Refer to this simple type in Appendix J |
| Sequence Block BEGINS | | | | |

| Complex Type: ScanEventType | | | | |
|------------------------------------|---|--------------------------|-----------------------|---|
| Field | Format | Acceptable Values | Business Rules | Comments |
| City | mailxml_base:s45 | | Optional | Refer to this simple type in Appendix J |
| State | mailxml_base:stateCode | | Optional | Refer to this simple type in Appendix J |
| Sequence Block ENDS | | | | |
| USPSFacilityName | mailxml_base:s50 | | Optional | Refer to this simple type in Appendix J |
| ScanDateTime | xs:dateTime | | Optional | |
| ContainerScanState | mailxml_dd:ContainerScanStateType | | Optional | Refer to this simple type in Appendix J |
| ScanStatus | mailxml_base:inductionStatusType | | Optional | Refer to this simple type in Appendix J |
| ScanIssueDescription | mailxml_base:s50 | | Optional | Refer to this simple type in Appendix J |
| ScanIssueResolution | mailxml_base:s50 | | Optional | Refer to this simple type in Appendix J |
| Sequence Block ENDS | | | | |

Appendix I: Extract of Mail.XML 12.0B Simple Types Definitions

The definitions contained within this appendix are an extract from the Mail.XML 12.0B Simple Types Definitions. Please see the latest Data Distribution guide (see Appendix J for instructions to obtain guide) for a full list of simple types definitions.

1.1 simpleType: CRIDType

| Tag | Mail.XML 12.0B |
|-----------|----------------|
| Base | xs:string |
| maxLength | 15 |
| minLength | 1 |
| pattern | ([0-9])* |

1.2 simpleType: IMcbType

| Tag | Mail.XML 12.0B |
|-----------|----------------|
| Base | xs:string |
| maxLength | 24 |
| minLength | 21 |

1.3 simpleType: IMpbType

| Tag | Mail.XML 12.0B |
|-----------|----------------|
| Base | String |
| maxLength | 34 |
| minLength | 34 |

1.4 simpleType: IMtbType

| Tag | Mail.XML 12.0B |
|-----------|----------------|
| Base | String |
| maxLength | 24 |
| minLength | 24 |

1.5 simpleType: jobIDType

| Tag | Mail.XML 12.0B |
|------------|----------------|
| Base | xs:string |
| maxLength | 8 |
| minLength | 1 |
| whiteSpace | Preserve |

1.6 simpleType: localeKeyType

| Tag | Mail.XML 12.0B |
|------|------------------|
| Base | mailxml_base:s09 |

1.7 simpleType: inductionStatusType

| Tag | Mail.XML 12.0B |
|-------------|----------------|
| Base | xs:string |
| enumeration | A = Accepted |
| enumeration | N = Rejected |

1.8 simpleType: mailerID6Type

| Tag | Mail.XML 12.0B |
|------|-------------------|
| Base | mailxml_base:ns06 |

1.9 simpleType: mailerID9Type

| Tag | Mail.XML 12.0B |
|------|-------------------|
| Base | mailxml_base:ns09 |

1.10 simpleType: mailXMLContainerType

| Tag | Mail.XML 12.0B |
|-------------|--|
| Base | xs:string |
| enumeration | 1 = #1 Sack |
| enumeration | 2 = #2 Sack |
| enumeration | 3 = #3 Sack |
| enumeration | 4 = 01V Sack |
| enumeration | 5 = 03V Sack |
| enumeration | 6 = OD Sack |
| enumeration | 7 = OD Parcel |
| enumeration | 8 = OD Full Tray Box |
| enumeration | 9 = OD Half Tray Box |
| enumeration | 10 = Flat Trays |
| enumeration | 11 = FRE/FRB |
| enumeration | 12 = OD Surface Transported Pallets |
| enumeration | 13 = OD Full Pallet Box (Surface Only) |
| enumeration | 14 = OD Half Pallet Box (Surface Only) |
| enumeration | E = EMM Tray |
| enumeration | F = Flat Tub |
| enumeration | L = Logical Tray |
| enumeration | O = 1' Tray |
| enumeration | P = Pallet |
| enumeration | S = Sack (General) |
| enumeration | T = 2' Tray |
| enumeration | V = Sack (Virtual) |
| enumeration | B = Bedload |
| enumeration | U – Unit Load Device |
| enumeration | Z = User Pallet |
| enumeration | X = (Future Placeholder) |
| enumeration | H = EIRS 61 – Hamper, Large Canvas |
| enumeration | A = EIRS 61P – Hamper, Large Plastic |
| enumeration | G = EIRS 66 – General Purpose Mail Container w/Gate |
| enumeration | D = EIRS 68 – Eastern Region Mail Container w/Web Door |
| enumeration | R = EIRS 84 – Wire Container Rigid |
| enumeration | C = EIRS 84C – Collapsible Wire Container |
| enumeration | M = Logical Pallet (MLOCR) |
| enumeration | AB = Air Box |
| enumeration | <i>Note: For Mail.XML 12.0B Awhen this value is provided – the PostalOne! system will reject the message with appropriate message.</i> |
| enumeration | Y = PMOD Sack |

1.11 simpleType: reasonCodeType

| Tag | Mail.XML 12.0B |
|-------------|---|
| Base | xs:string |
| enumeration | A = Attempted – Not Known |
| enumeration | B = Returned for Better Address |
| enumeration | D = Outside Delivery Limits |
| enumeration | E = In Dispute |
| enumeration | I = Insufficient Address |
| enumeration | L = Illegible |
| enumeration | M = No Mail Receptacle |
| enumeration | N = No such number |
| enumeration | P = Deceased |
| enumeration | Q = Not Deliverable as Addressed/ Unable to Forward |
| enumeration | R = Refused |
| enumeration | S = No Such Street |
| enumeration | U = Unclaimed |
| enumeration | V = Vacant |
| enumeration | X = No Such Office |

Appendix J: Data Distribution Guides

The Mail.XML schema shown within this user guide is made available as a sample only. For actual details on the rules and data elements, please review the Data Distribution guides for the current Full-Service release. This appendix shows step-by-step instructions on how to obtain the latest guides.

STEP 1: Go to the Postal Service Mail.XML Specific Documents page on RIBBS. Link: https://ribbs.usps.gov/intelligentmail_guides/documents/tech_guides/xmlspec/xmlspec.htm

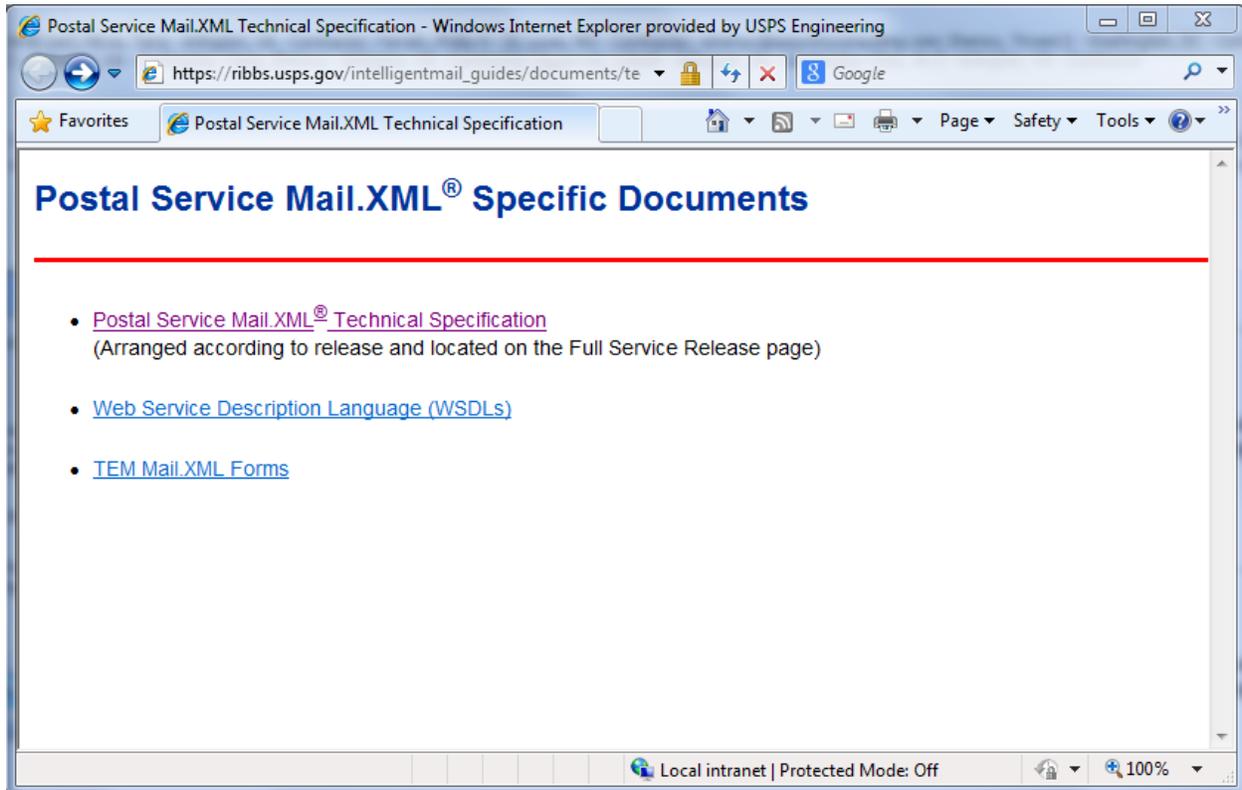

Figure 54: Postal Service Mail.XML Specific Documents Page on RIBBS

STEP 2: Click on “Postal Service Mail.XML® Technical Specification” link to go to the current Full Service Releases page on RIBBS

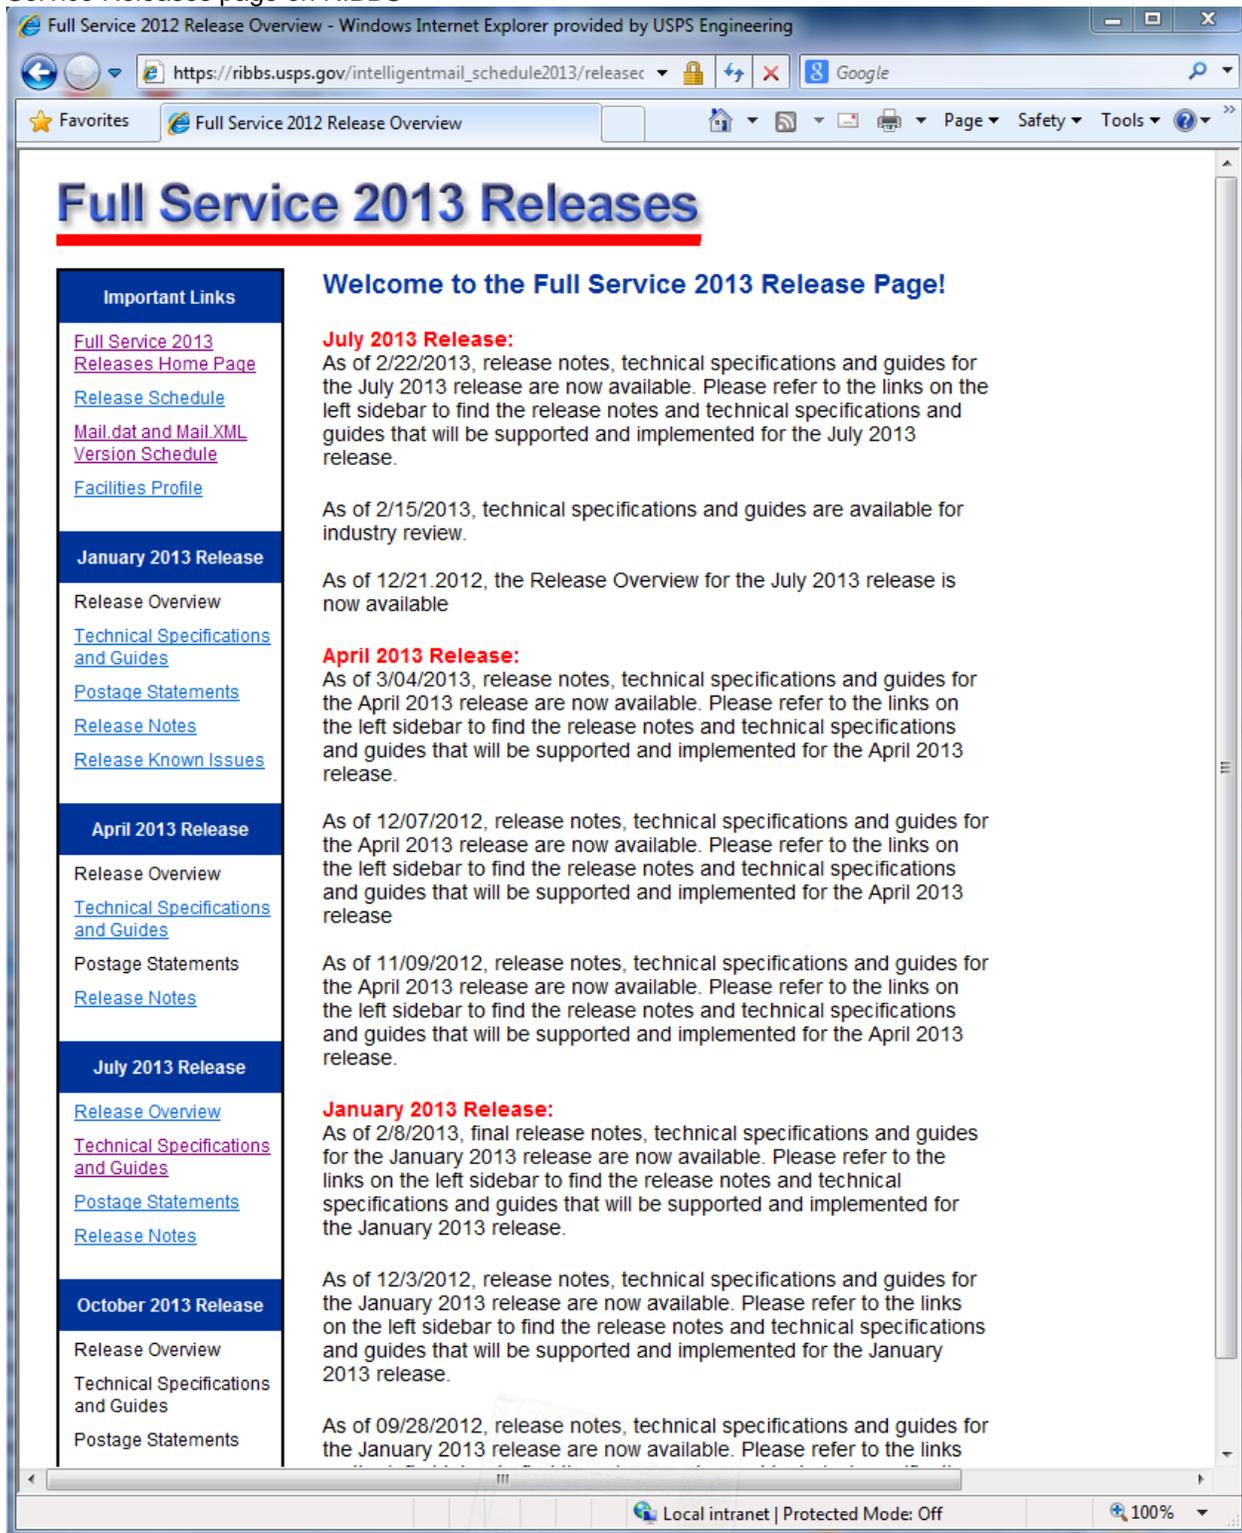

Figure 55: Full Service Release Page on RIBBS

STEP 3: Under the current release, click on the “Technical Specifications and Guides” link to view the currently supported Technical Specifications and Guides.

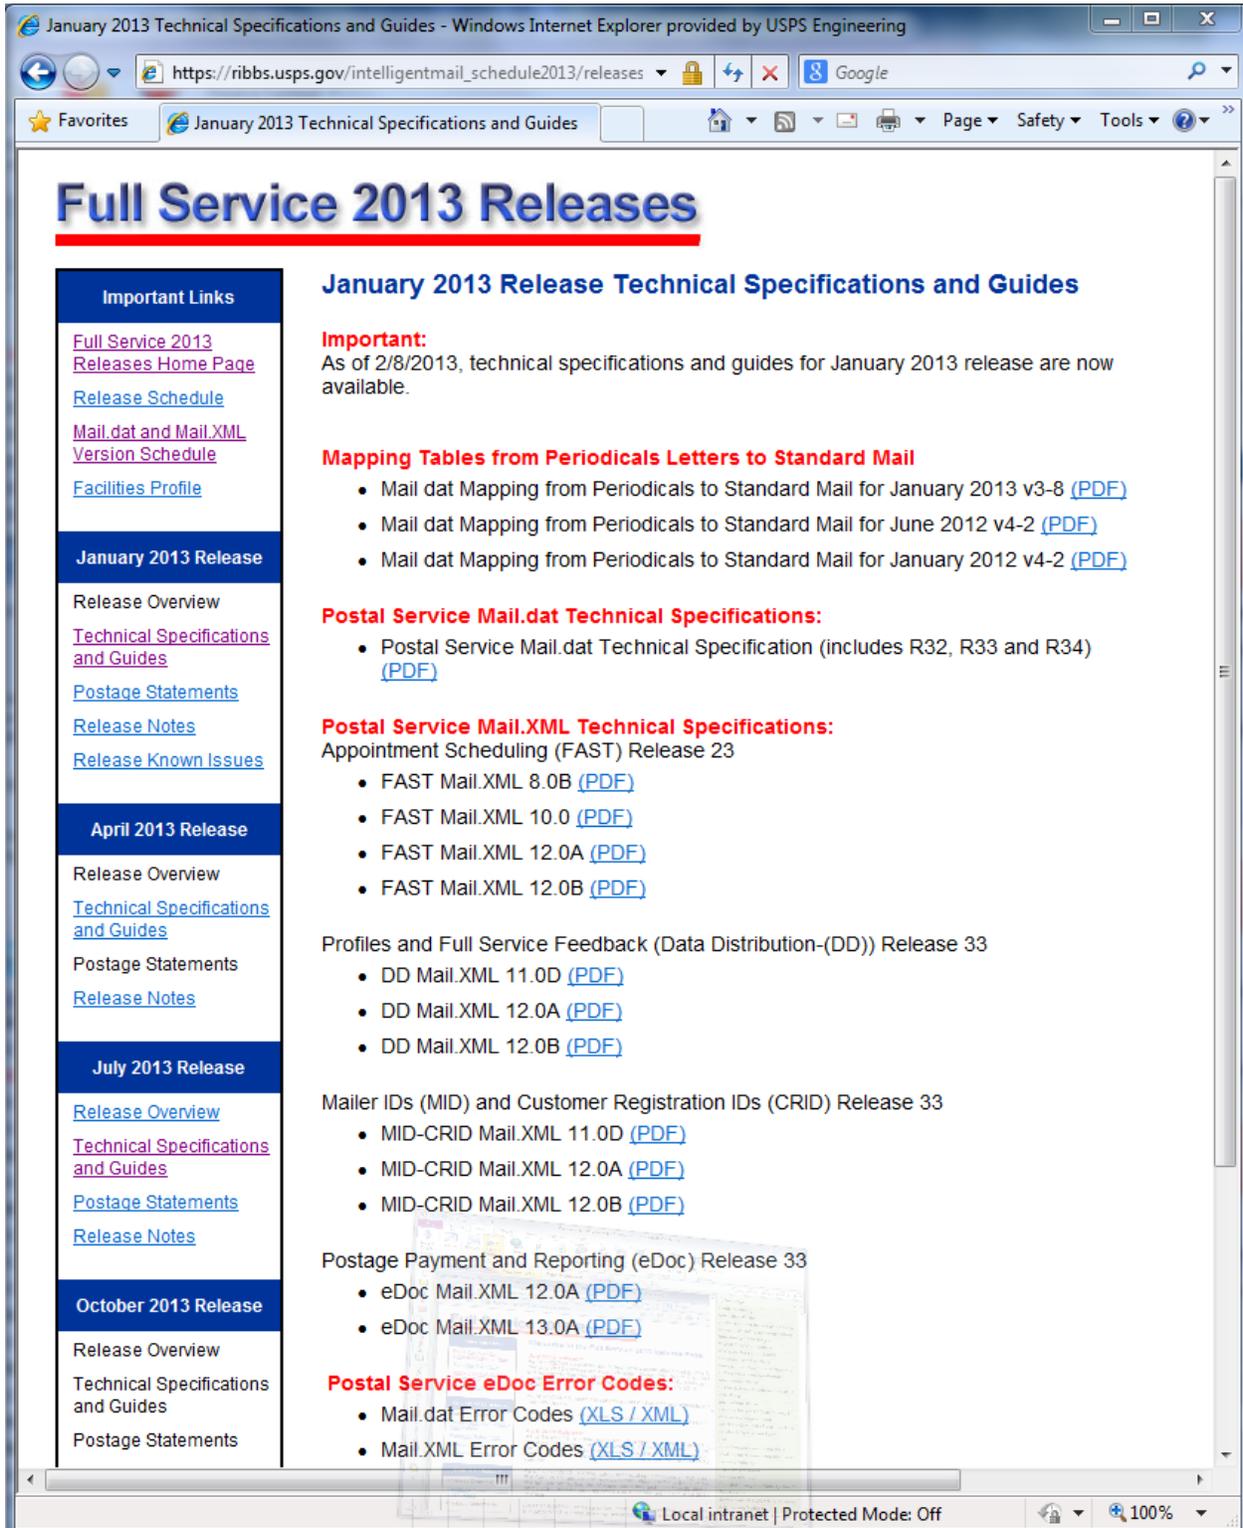

Figure 56: Full Service Technical Specifications and Guides

STEP 4: Under the “Profiles and Full Service Feedback (Data Distribution-(DD))” section, open the Data Distribution technical guide that is applicable to the Mail.XML version you wish to use.

Profiles and Full Service Feedback (Data Distribution-(DD)) Release 33
