

Release 27.0.2 Notes – Version 2

The *PostalOne!* Release 27.0.2.1 deployed on August 31, 2011 to introduce software upgrades to the system, correcting an issue that was identified. These notes provide the contents of the release.

1.	MAILERS (EXTERNAL)	2
1.1	Performance Based Verification.....	2

1. Mailers (External)

PostalOne! Releases 27.0.2.1 deployed on August 31, 2011 to introduce a software upgrade to the system. The upgrade includes a correction to the Performance Based Verification (PBV) system.

1.1 Performance Based Verification

A software enhancement to the Performance Based Verification (PBV) system was implemented to improve the parallel computing. The PBV database will now be able to spawn more sessions to process data more quickly to the Full-Service Intelligent Mail Device (F-S IMD). The issue occurred when data processing was bottlenecking, causing the F-S IMD to not receive data in a timely manner from *PostalOne!*. [82566]
