

RELEASE NOTES 44.0.4.2

The *PostalOne!* system Release 44.0.4.2 will be implemented on November 13, 2016 to introduce software modifications to the system. This includes corrections to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

Contents of this document are subject to change.

1.0 Mail.dat Client Downloads

There is no new Mail.dat client version with this release. Users should continue to use Mail.dat client version 44.0.0.0_PROD.

The current Mail.dat Client may be downloaded from the Business Customer Gateway (BCG) using the following path: Mailing Services → Electronic Data Exchange [Go to Service] → Mail.dat download (Windows 32-bit, Windows 64-bit or Solaris)

2.0 Corrections to Known Issues

This information is derived from External Trouble Reports (ETRs) Change Requests (CRs) and Engineering Change Requests (ECRs).

2.1 Full-Service Mail Entry Postage Assessments

The Mail Entry Postage Assessment process has been updated to correct a logic issue that prevented some Verification Assessment Evaluator (VAE) and Business Service Administrator (BSA) users from receiving a notification email message informing them of the assessment. A logic defect in retrieval of the Customer Registration ID (CRID) associated with the permit resulted in a failure to identify the VAE or BSA user to whom an email notification should have been sent.
