PostalOne! Release 26 Update/Review

- ✚ Mailers requested a schedule of upcoming patch releases and would like to be notified of all releases regardless of a *PostalOne!* outage.
- ✚ Release notes will include up to Patch Release 26.0.0.3.
 - There will be a new patch release including a Mail.dat client January 30, 2011.
- ✚ The group questioned why errors (BPM validation) were not detected during CAT testing. Mailers would like the CAT environment to mirror production and correct refreshing of environments to ensure accurate testing. After the meeting: (COM 72647)
- ✚ MicroStrategy Reports
 - The accuracy of the Delivery Point Validation (DPV) was questioned. A help desk ticket has been opened for review of the problem.
 - After the meeting a help desk ticket was opened to review why the *Full Service eDoc Verification Detailed Report* displays warnings. Only errors should display on the report. (COM 72650)
- ✚ Flats Sequencing Strategy (FSS)
 - Periodical mailers who use FSS preparation as currently implemented receive incorrect prices that necessitate manual refunds.
 - CR 70485 to add FSS preparation requirements was approved by Management for the Full Service Release 6 schedule assignment.

Other Group Input

- ✚ New Publication Report
 - ETR 70486 is scheduled for production patch 26.0.0.4 on 1/16/2011. This will correct the issue when implemented. Workaround: To select all postage statements, click each checkbox individually instead of clicking the ALL link located at the top of the result set on the publication report. Selecting the postage statements manually will ensure that all expected data will appear on the final report.
