

PAVE Modernization Future State

With the retirement of the PAVE and ZAP programs the Full-Service certification process will be updated to include validations for presort and zone discount conditions. As part of these changes the following will be updated:

- A TEM test deck will be provided for mailers that are completing presort certifications.
- New validations will be added to the Electronic Verification tab.
- The TEM Vendor Enrollment Tool will be updated to include the new scenarios.
- The Certified Full-Service Vendor List will be updated to display the new certifications.

As part of the solution USPS will provide a test deck to software vendors who are interested in completing presort certifications, this deck will provide vendors with the necessary address information in order to complete presorts across all mail class/category combinations. Information provided in the deck will include the following fields: Address Line 1, Address Line 2, City, State, and Zip. If vendors require any other address information they will have to run the deck through the CASS process to generate the additional information.

The testing process itself will remain largely unchanged; Vendors will fill out the enrollment tool and submit mailings through PostalOne! based on the test scenarios identified. Jobs will be checked for compliance in PO!/SASP, results will be displayed in the BCG, and vendors will have the ability to resubmit mailings for all failed scenarios. One change to note is that as part of the new verification process vendors will be required to access the TEM version of the mailer scorecard to review errors.

Reviewing Presort Errors

To review your mailings for any presort errors please review the following steps:

1. Go to the BCG home page.
2. From the Gateway homepage, click the Electronic Data Exchange link (under the Design & Prepare section).
3. Under the Test Environment for Mailers (TEM) – Mail.dat section, select the Go to TEM link. You will see a red banner at the top of the page which says “You are in the Test Environment for Mailers (TEM)”.
4. Select Mailing Reports from the left menu bar.
5. Click on the Mailer Scorecard report.
6. Once in the Mailer Scorecard, select either eDoc Submitter or Mail Owner/Preparer then generate the Mailer Scorecard for the current month, CRID combination that you are testing.
7. Check for any of the following nesting/sortation error codes on the electronic verification tab:
 - a. Container Labeling List Errors: 7861, 7841, 7831
 - b. HU Labeling List Errors: 7842, TBD, 7851
 - c. Bundle Labeling List Errors: 7832, 7852

New Full-Service Validations

The following validations will be added to the FS Certification process.

Presort Validations

Presort certifications will be added by individual mail classes. These include First-Class, Standard, BPM, and Periodicals. Additionally the presort certifications will be specific to the following mail processing categories. A detailed listing of presort options is shown below broken down by mail class, mail processing category, labeling lists, and error validations.

Labeling List Errors:

Detailed information on possible labeling list errors can be seen in the table below.

Presort Level	Error Level	MSTR Error Code	Error Description
Container	Container	7861	Container is not destined for a valid ZIP Code based on its label list.
Container	Handling Unit	7841	The HU are not destined for a valid ZIP Code based on the label list of their container.
Container	Bundle	7831	The Bundles are not destined for a valid ZIP Code based on the label list of their container.
HU	Handling Unit	7842	HU is not destined for a valid ZIP Code based on its label list.
HU	Bundle	TBD	The bundles are not destined for a valid ZIP Code based on the label list of their Handling Unit.
HU	Piece	7851	The pieces are not destined for a valid ZIP Code based on the label list of their HU.
Bundle	Bundle	7832	Bundle is not destined for a valid ZIP Code based on its label list.
Bundle	Piece	7852	The pieces are not destined for a valid ZIP Code based on the label list of their bundle.

Supported Labeling Lists:

The following labeling lists will be supported in the presort certifications.

- L001 5-Digit Scheme - Periodicals, Standard Mail, and Package Services Flats and Irregular Parcels
- L002 3-Digit ZIP Code Prefix Matrix
- L004 3-Digit ZIP Code Prefix Groups - ADC Sortation

- L005 3-Digit ZIP Code Prefix Groups - SCF Sortation

- L007 5-Digit Scheme - Periodicals, Standard Mail, and Package Services Flats in Bundles
- L008 3-Digit Scheme - Periodicals, Standard Mail, and BPM Flats in Bundles
- L009 Mixed ADCs - Periodicals, Package Services Flats and Irregular Parcels and Standard Mail Flats
- L010 NDC/ASF Entry - Standard Mail Letters and Package Services Irregular Parcels
- L011 Non-NDC/ASF Entry - Periodicals and Standard Mail Letters
- L012 5 Digit ZIP Scheme Combination
- L201 Periodicals Origin Split and First-Class Mail Mixed ADC/AADC
- L601 National Distribution Centers (NDCs)
- L602 ASFs
- L801 AADCs - Letter-Size Mailings

HU Labeling List Verification

The following standards will be applied to presort certification.

5-Digit Presort

This presort standard does not use a labeling list for verification.

1. Compare HU Zip to piece zips
 - a. If non matches are found log mail piece error 7851: *The piece is not destined for a valid ZIP Code based on the label list of their HU.*

3-Digit/3-D Scheme/ADC/Mixed ADC Presort

This presort standard will be applied to the following labeling lists: L002, L004, L005, L007, L009, L010, L011, L012, L201, and L801.

1. Determine what labeling list should be used based on mail piece characteristics:
 - Class (FCM, Standard, BPM, etc.)
 - Processing Category (Flat, Letter, Postcard, etc.)
 - Sortation Level (5D, 5DS, 3D, etc.)
 - Container Level (Pallet, Tray, Sack, etc.)
 - Machinability (Machinable, Non-Machinable)
 - Automation(Automation, Non-Automation)
2. Determine if the actual entry date or the mailing date should be used for the date comparison.
 - If the HU is nested in a physical container, is an orphan physical HU, or is an orphan logical HU then determine if the actual entry date is populated. If not use the mailing date.
 - For all other cases use the mailing date.
3. Determine if the grace date exists, if it does use it as the upper bound on the date otherwise use the expiration date.
4. Based on criteria in steps 1-3 pull all active labeling lists and compare the HU Label to the Labeling List Label-To column.

- If no match is found log HU error 7842: *HU is not destined for a valid ZIP Code based on its label list.*
- 5. Based on criteria for steps 1-4 pull all active labeling lists and compare the mail piece destination zip to the valid destination zips from the labeling list.
 - If no match is found log mail piece error 7851: *The piece is not destined for a valid ZIP Code based on the label list of their HU.*
