

Workgroup 176 (RIBBS Redesign) May 6, 2016

- The site will be fully functional with all info migrated by the end of this month.
- A plan is being put into place to control the data going to the NCSC for updates and changes.
- Results from the beta testers were discussed.
- An issue was reported with the search when using the Mozilla browser. Another workgroup member checked and did not have the same issue.
  - Since there could be others with this issue, the problem will be checked by the developers.
- There seem to be less RSS messages than would be expected.
  - The messages that are received are poorly formatted.
    - This will be reviewed by the developers.
- The magnifying glass to the right of the search box has no functionality when pressed.
  - The developers will make pressing the magnifying glass analogous to pressing enter on the keyboard.
- Links to related sites should be added to the landing page for quicker navigation.
  - FAST, the PRC and MTEOR should be added.
    - We will review which links to add and report back to the workgroup for their thoughts.
- The site needs landing pages.
  - Templates are being developed and should be complete at the end of this month.
- We will meet again once all the content and templates have been loaded onto the site.
  - This should be at the end of May or beginning of June.
